PT New composition comprising two or more isolated polypeptides, useful for
PT preparing a medicament for treating pain in an animal.
XX
PS Claim 1; Page; 1017pp; English.
XX
CC The invention discloses a composition comprising two or more isolated rat
CC or human polynucleotides or a polynucleotide which represents a fragment,
CC derivative or allelic variation of the nucleic acid sequence. Also
CC claimed are a vector comprising the novel polynucleotide, a host cell
CC comprising the vector, a method for identifying a nucleotide sequence
CC which is differentially regulated in an animal subjected to pain and a
CC kit to perform the method, an array, a method for identifying an agent
CC that increases or decreases the expression of the polynucleotide sequence
CC that is differentially expressed in neuronal tissue of a first animal
CC subjected to pain, a method for identifying a compound which regulates
CC the expression of a polynucleotide sequence which is differentially
CC expressed in an animal subjected to pain, a method for identifying a
CC compound that regulates the activity of one or more of the
CC polynucleotides, a method for producing a pharmaceutical composition, a
CC method for identifying a compound or small molecule that regulates the
CC activity in an animal of one or more of the polypeptides given in the
CC specification, a method for identifying a compound useful in treating
CC pain and a pharmaceutical composition comprising the one or more
CC polypeptides or their antibodies. The polynucleotide or the compound that
CC modulates its activity is useful for preparing a medicament for treating
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene
CC therapy). The sequence presented is a human DNA (shown in Table 2 of the
CC

XX Recombinant nucleic acid useful for diagnosis and treatment of carcinoma  
PT comprises a nucleotide sequence.

XX Claim 1; SEQ ID NO 160; Opp; English.

XX The present invention relates to novel DNA and protein sequences which  
CC are associated with carcinomas. The sequences are useful for: (i) for  
CC screening drug candidates; (ii) for screening of bioactive agent capable  
CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of  
CC a bioactive agent capable of modulating the activity of CAP; (iv) for  
CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing  
CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating  
CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;  
CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for  
CC determining Carcinoma Associated (CA) gene copy number. In addition, the  
CC CA genes are useful as DNA vaccines and the CAP are useful as markers of  
CC carcinoma including lymphoma. The present sequence is one such CA coding  
CC sequence. Note: This patent is an equivalent to basic patent  
CC US2002182586A1, for which no sequence data was published

XX Determining susceptibility of an individual to joint space narrowing,  
PT osteophyte development and/or joint pain comprises identifying whether  
PT the individual has at least one polymorphism in a polynucleotide encoding  
PT a protein.

XX Disclosure; SEQ ID NO 387; 297pp; English.

XX The invention relates to a method of determining susceptibility of an  
CC individual to joint space narrowing and/or osteophyte development and/or  
CC joint pain comprising identifying whether the individual has at least one  
CC polymorphism in a polynucleotide encoding at least one of the protein  
CC listed in the specification. The methods, composition and agent are  
CC useful for modulating the susceptibility of an individual to joint space  
CC narrowing and/or osteophyte development and/or joint pain that is  
CC associated with a disease, preferably osteoarthritis. The cell line and  
CC the non-human animal are useful for screening for an agent for diagnosing  
CC an individual having susceptibility to joint space narrowing and/or  
CC osteophyte development and/or joint pain. This sequence corresponds to  
CC the polynucleotide encoding a protein listed in the specification. (Note:  
CC The sequence data for this patent did not form part of the printed  
CC specification but was obtained in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences).

PT Determining the degree of cytosine methylation in genomic DNA, useful for
PT diagnosis and prognosis, comprises selective hybridization of amplicons
PT from chemically treated DNA.
XX
XX Claim 12; 56pp + Sequence Listing; 56pp; German.
XX
CC This invention describes a novel method for determining the degree of
CC methylation of a particular cytosine in a motif 5'-CpG-3', present in a
CC genomic sample of DNA. The sample is treated chemically to convert
CC cytosine (C) but not methylated C, to uracil, then part of the genomic
CC DNA that contains the target C is amplified to form a labeled amplicon.
CC The amplicon is hybridised to two classes, each with at least one member,
CC of oligonucleotides and/or peptide-nucleic acid (PNA) oligomers and the
CC degree of hybridisation to both classes is determined from the label on
CC the amplicon. From the ratio of labels hybridised to the two classes of
CC oligomers, the degree of methylation is calculated. The method is used:
CC (i) for diagnosis and/or prognosis of side effects of therapeutic drugs
CC and of a wide range of diseases, e.g. cancer, disorders of the central
CC nervous, cardiovascular, gastrointestinal and respiratory systems etc.,
CC particularly by detecting mutations or single nucleotide polymorphisms
CC (SNP's); and (ii) for differentiation of cell or tissue types and for
CC investigating cell differentiation. The method allows the methylation
CC status of many C residues to be determined simultaneously. ABQ13410-
CC ABQ54121 represent genomic DNA sequences used to illustrate the method
CC for determining the degree of cytosine methylation described in the
CC disclosure of the invention

XX New antisense nucleic acids, useful for identifying proteins or screening  
PT for homologous nucleic acids required for cellular proliferation to  
PT isolate candidate molecules for rational drug discovery programs.  
XX Claim 14; SEQ ID NO 12160; 1766pp; English.  
XX The invention relates to an isolated nucleic acid comprising any one of  
CC the 6213 antisense sequences given in the specification where expression  
CC of the nucleic acid inhibits proliferation of a cell. Also included are:  
CC (1) a vector comprising a promoter operably linked to the nucleic acid  
CC encoding a polypeptide whose expression is inhibited by the antisense  
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated  
CC polypeptide or its fragment whose expression is inhibited by the  
CC antisense nucleic acid; (4) an antibody capable of specifically binding  
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular  
CC proliferation or the activity of a gene in an operon required for  
CC the gene product; (7) identifying a compound that influences the activity of  
CC the gene product or that has an activity against a biological pathway  
CC required for proliferation, or that inhibits cellular proliferation; (8)  
CC identifying a gene required for cellular proliferation or the biological  
CC pathway in which a proliferation-required gene or its gene product lies  
CC or a gene on which the test compound that inhibits proliferation of an  
CC organism acts; (9) manufacturing an antibiotic; (10) profiling a  
CC compound's activity; (11) a culture comprising strains in which the gene  
CC product is overexpressed or underexpressed; (12) determining the extent  
CC to which each of the strains is present in a culture or collection of  
CC strains; or (13) identifying the target of a compound that inhibits the  
CC proliferation of an organism. The antisense nucleic acids are useful for  
CC identifying proteins or screening for homologous nucleic acids required  
CC for cellular proliferation to isolate candidate molecules for rational  
CC drug discovery programs, or for screening homologous nucleic acids  
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,  
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target  
CC prokaryotic essential genes. Note: The sequence data for this patent did  
CC not form part of the printed specification, but was obtained in  
CC electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences

XX
XX The invention relates to an isolated or purified nucleotide sequences (I)
CC from Legionella pneumophila Paris strain. (II), and their related
CC sequences or fragments, are useful as primers and probes for detection
CC and amplification, including differentiation between the Paris and
CC Philadelphia strains of Legionella pneumophila and to prepare recombinant
CC (hybrid) polypeptides (II). (II) are also useful for preparation of
CC specific antibodies (Ab), also used for detection/identification of
CC Legionella, and some (I), specifically those involved in synthesis of
CC surface proteins, are targets for identification of inhibitors. (II), or
CC vectors that contain (I), are useful as vaccines and immunogenic
CC compositions, for treatment and prevention of infections by L.
CC pneumophila. The present sequence represents a L. pneumophila DNA.

XX WPI; 2003-615964/58.
XX
XX New polynucleotide sequences obtained from various cDNA libraries, useful
PT as hybridization probes, as oligomers for PCR, for chromosome and gene
PT mapping, in the recombinant production of protein, or in generating
PT antisense DNA or RNA.
XX
XX Claim 1; SEQ ID NO 26833; 44pp; English.
PS
XX The invention relates to an isolated polynucleotide comprising any one of
CC 38043 cDNA sequences, appearing as ACH12789-ACH50831, whose sequence was
CC determined by the technique of SBH (sequencing by hybridisation). Also
CC included is a purified polypeptide comprising a sequence corresponding to
CC a reading frame of the novel polynucleotide. The nucleic acid sequences
CC are useful in diagnostics as expressed sequence tags (EST) for
CC identifying expressed genes or for physical mapping of the human genome,
CC in forensics, in assessing biodiversity, or in identifying mutations
CC responsible for genetic disorders and other traits. The nucleotide
CC sequences are also useful as hybridisation probes, as oligomers for PCR,
CC for chromosome and gene mapping, in the recombinant production of
CC protein, or in generating antisense DNA or RNA. The purified polypeptide
CC is useful for generating antibodies specific for it. The present sequence
CC is one of the 38043 isolated cDNA/EST sequences. Note: The sequence data
CC for this patent did not form part of the printed specification, but was
CC obtained in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequence.html?DocID=20030073623

XX PI  
XX WPT; 2001-476224/51.  
XX Isolated polypeptide for treating, preventing and/or prognosing  
PT disorders related to the respiratory system including respiratory cancers  
PT and also for testing and detection e.g. diagnosis.  
XX  
XX Disclosure; SED ID No 1132; 546pp; English.  
XX  
XX The present invention relates to the isolation of novel human respiratory  
CC antigens (AAU17695-AAU17975), and cDNA and genomic sequences encoding for  
CC these polypeptides. The sequences of the invention are useful for  
CC preventing, treating and/or prognosing disorders related to the  
CC respiratory system including throat disorders (e.g. vocal cord paralysis,

CC tonsillitis, and laryngitis), lung disorders e.g. pneumonia, allergic  
CC disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose  
CC disorders and cancers of the respiratory tissues e.g. lung cancer. The  
CC polynucleotide sequences of the invention are useful in gene therapy and  
CC antisense therapy. AAS28161-AAS28764 represent genomic sequences encoding  
CC for novel human respiratory antigens. Note: The sequence data for this  
CC patent did not form part of the printed specification, but was obtained  
CC in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences

XX  
PA (HUMA-) HUMAN GENOME SCI INC.  
XX  
XX Rosen CA, Ruben SM, Barash SC;  
PI WPI; 2003-902033/82.  
XX  
XX Novel respiratory system antigen and polynucleotides encoding the polypeptides, useful for treating diagnosing, treating or preventing tonsillitis, pneumonia, asthma and cystic fibrosis, emphysema, throat cancer.  
PS Disclosure; SEQ ID NO 1132; 236pp; English.  
XX  
XX The invention describes an isolated polypeptide (I) comprising an amino acid sequence that is at least 90% identical to polypeptide fragment of any one of 299 respiratory system antigen sequences (PS) and having biological activity, polypeptide domain or epitope of PS, full-length protein of PS, or variant, allelic variant or species homolog of PS. (I) or a polynucleotide (II) encoding (I) is also useful for diagnosing a pathological condition or a susceptibility to a pathological condition in a subject which involves determining the presence or absence of mutation in (II) or determining the presence or amount of expression of (I) in a biological sample and diagnosing a pathological condition based on the result. The human respiratory system associated polynucleotides, the polypeptides encoded by them, and antibodies that immunospecifically bind these polypeptides are useful in diagnosis, treatment, prevention and/or prognosis of disorders of respiratory system such as throat disorders (e.g., vocal cord paralysis, tonsillitis, and laryngitis), lung disorders (e.g., pneumonia), allergic disorders, (e.g., asthma and eosinophilic pneumonia), pleurisy, cystic fibrosis, emphysema, histiocytosis,

CC sarcoidosis, nose disorders (rhinitis and sinusitis), neoplasms and/or  
CC cancers of respiratory tissues (e.g., throat cancer, lung cancer, and  
CC cancer of the nose). The polynucleotides are useful in gene therapy  
CC techniques, for chromosome identification, identifying individuals from

XX New human respiratory system-related polypeptide and genes, useful for  
PT treating, preventing or diagnosing e.g. pneumonia, lung cancer, cystic  
PT fibrosis, asthma, sarcoidosis, rhinitis, leukemia, inflammations or  
PT sinusitis.  
XX  
XX Disclosure; SEQ ID NO 1132; 202pp; English.  
XX  
XX This invention is related to a novel isolated polypeptide, which  
CC comprises a human respiratory system-related polypeptide, and the DNA  
CC sequence which encodes it. The invention may be useful for the  
CC development of compounds with an antiasthmatic, antibacterial,  
CC antiinflammatory, cytostatic, antianaemic or antiallergic activity. In  
CC addition, the sequences disclosed may be useful for gene therapy. The  
CC polypeptide or polynucleotide is useful for treating, preventing or  
CC ameliorating a medical condition, for example pneumonia, lung cancer,  
CC cystic fibrosis, asthma, sarcoidosis, rhinitis, anaemia, leukaemia,  
CC inflammations, sinusitis, chronic obstructive pulmonary disease or  
CC infectious diseases. The polypeptide or polynucleotide is also useful for  
CC diagnosing any of these diseases or a susceptibility to the disease. The  
CC present sequence is that of a human DNA sequence which is related to a  
CC human respiratory system associated gene of the invention.

XX  
XX The invention relates to an isolated nucleic acid molecule (I) comprising  
CC a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of the  
CC specification or its complement. (I) is useful for: (a) assessing whether  
CC a patient is afflicted with prostate cancer; (b) monitoring the  
CC progression of prostate cancer in a patient; (c) assessing the efficacy  
CC of a test compound to inhibit prostate cancer in a patient; (d) assessing  
CC the efficacy of a therapy for inhibiting prostate cancer in a patient;  
CC (e) selecting a composition for inhibiting prostate cancer in a patient;  
CC (f) assessing the prostate cell carcinogenic potential of a compound; (g)  
CC determining whether prostate cancer has metastasized in a patient; (h)  
CC assessing the aggressiveness or indolence of prostate cancer in a patient  
CC ; (i) is also useful as a pharmacodynamic or pharmacogenomic marker

XX (HUMA-) HUMAN GENOME SCI INC.  
PA Rosen CA, Barash SC, Ruben SM;  
XX WPI; 2001-476224/51.  
XX P-PSDB; AAU17942.  
XX Isolated polypeptide for treating, preventing and/or prognosing  
PT disorders related to the respiratory system including respiratory cancers  
PT and also for testing and detection e.g. diagnosis.  
XX Claim 4; SED ID No 268; 546pp; English.  
XX The present invention relates to the isolation of novel human respiratory  
CC antigens (AAU17685-AAU17975), and cDNA and genomic sequences encoding for  
CC these polypeptides. The sequences of the invention are useful for  
CC preventing, treating and/or prognosing disorders related to the  
CC respiratory system including throat disorders (e.g. vocal cord paralysis,  
CC tonsillitis, and laryngitis), lung disorders e.g. pneumonia, allergic  
CC disorders e.g. asthma, pleurisy, cystic fibrosis, emphysema, nose  
CC disorders and cancers of the respiratory tissues e.g. lung cancer. The  
CC polynucleotide sequences of the invention are useful in gene therapy and  
CC antisense therapy. AAS27869-AAS28159 encode for novel human respiratory  
CC antigens. Note: The sequence data for this patent did not form part of  
CC the printed specification, but was obtained in electronic format directly  
CC from WIPO at ftp.wipo.int/pub/published\_pct\_sequences

XX Novel respiratory system antigen and polynucleotides encoding the  
PT polypeptides, useful for treating diagnosing, treating or preventing  
PT tonsillitis, pneumonia, asthma and cystic fibrosis, emphysema, throat  
PT cancer.  
XX

PS Claim 1; SEQ ID NO 268; 236pp; English.  
XX The invention describes an isolated polypeptide (I) comprising an amino  
CC acid sequence that is at least 90% identical to polypeptide fragment of  
CC any one of 299 respiratory system antigen sequences (PS) and having  
CC biological activity, polypeptide domain or epitope of PS, full-length  
CC protein of PS, or variant, allelic variant or species homolog of PS. (I)  
CC or a polynucleotide (II) encoding (I) is also useful for diagnosing a  
CC pathological condition or a susceptibility to a pathological condition in  
CC a subject which involves determining the presence or absence of mutation  
CC in (II) or determining the presence or amount of expression of (I) in a  
CC biological sample and diagnosing a pathological condition based on the  
CC result. The human respiratory system associated polynucleotides, the  
CC polypeptides encoded by them, and antibodies that immunospecifically bind  
CC these polypeptides are useful in diagnosis, treatment, prevention and/or  
CC prognosis of disorders of respiratory system such as throat disorders  
CC (e.g., vocal cord paralysis, tonsillitis, and laryngitis), lung disorders  
CC (e.g., pneumonia), allergic disorders, (e.g., asthma and eosinophilic  
CC pneumonia), pleurisy, cystic fibrosis, emphysema, histiocytosis,  
CC sarcoidosis, nose disorders (rhinitis and sinusitis), neoplasms and/or  
CC cancers of respiratory tissues (e.g., throat cancer, lung cancer, and  
CC cancer of the nose). The polynucleotides are useful in gene therapy

(HUMA-) HUMAN GENOME SCI INC.

XX Rosen CA, Ruben SM, Barash SC;

XX WPI; 2003-765403/72.

XX P-PSDB; ADI97096.

XX New human respiratory system-related polypeptide and genes, useful for treating, preventing or diagnosing e.g. pneumonia, lung cancer, cystic fibrosis, asthma, sarcoidosis, rhinitis, leukemia, inflammations or sinusitis.

XX Claim 1; SEQ ID NO 268; 202pp; English.

XX This invention is related to a novel isolated polypeptide, which comprises a human respiratory system-related polypeptide, and the DNA sequence which encodes it. The invention may be useful for the development of compounds with an antiasthmatic, antibacterial, antiinflammatory, cytostatic, antianaemic or antiallergic activity. In addition, the sequences disclosed may be useful for gene therapy. The polypeptide or polynucleotide is useful for treating, preventing or ameliorating a medical condition, for example pneumonia, lung cancer, cystic fibrosis, asthma, sarcoidosis, rhinitis, anaemia, leukaemia, inflammations, sinusitis, chronic obstructive pulmonary disease or

CC infectious diseases. The polypeptide or polynucleotide is also useful for  
CC diagnosing any of these diseases or a susceptibility to the disease. The  
CC present sequence is that of a respiratory system associated human gene of  
CC the invention.

DR

XX New antisense nucleic acids, useful for identifying proteins or screening  
PT for homologous nucleic acids required for cellular proliferation to  
PT isolate candidate molecules for rational drug discovery programs.

XX

XX Claim 14; SEQ ID NO 41816; 1766pp; English.

PS

XX The invention relates to an isolated nucleic acid comprising any one of  
CC the 6213 antisense sequences given in the specification where expression  
CC of the nucleic acid inhibits proliferation of a cell. Also included are:  
CC (1) a vector comprising a promoter operably linked to the nucleic acid  
CC encoding a polypeptide whose expression is inhibited by the antisense  
CC nucleic acid; (2) a host cell containing the vector; (3) an isolated  
CC polypeptide or its fragment whose expression is inhibited by the  
CC antisense nucleic acid; (4) an antibody capable of specifically binding  
CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular  
CC proliferation or the activity of a gene in an operon required for  
CC proliferation; (7) identifying a compound that influences the activity of  
CC the gene product or that has an activity against a biological pathway  
CC required for proliferation, or that inhibits cellular proliferation; (8)  
CC identifying a gene required for cellular proliferation or the biological  
CC pathway in which a proliferation-required gene or its gene product lies  
CC or a gene on which the test compound that inhibits proliferation of an

CC organism acts; (9) manufacturing an antibiotic; (10) profiling a  
CC compound's activity; (11) a culture comprising strains in which the gene  
CC product is overexpressed or underexpressed; (12) determining the extent  
CC to which each of the strains is present in a culture or collection of  
CC strains; or (13) identifying the target of a compound that inhibits the  
CC proliferation of an organism. The antisense nucleic acids are useful for  
CC identifying proteins or screening for homologous nucleic acids required  
CC for cellular proliferation to isolate candidate molecules for rational  
CC drug discovery programs, or for screening homologous nucleic acids  
CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,  
CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target  
CC prokaryotic essential genes. Note: The sequence data for this patent did  
CC not form part of the printed specification, but was obtained in  
CC electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences

XX
XX New recombinant nucleic acid molecules and polypeptides from Gossypium
PT hirsutum, useful for producing plants with improved biological
PT characteristics (e.g. improved plant cold or drought tolerance).
XX
XX Claim 1; SEQ ID NO 839; 14pp; English.
XX
CC The invention relates to a recombinant polynucleotide comprising any of
CC the 58798 Cotton plant cDNA sequences mentioned in the specification.
CC Also a recombinant polypeptide comprising any of the 58798 amino acid
CC sequences mentioned in the specification and producing a plant having an
CC improved property. Producing a plant having an improved property
CC comprises transforming a plant with a recombinant construct comprising a
CC promoter region functional in a plant cell operably joined to a
CC polynucleotide comprising a coding sequence for a polypeptide associated
CC with the property, and growing the transformed plant. The polypeptide is
CC useful for improving plant cold tolerance, manipulating growth rate in
CC plant cells by modification of the cell cycle pathway, improving plant
CC drought tolerance, providing increased resistance to plant disease,
CC producing galactomannan (or lignin or plant growth regulators), improving
CC plant heat tolerance, improving plant tolerance to herbicides, increasing
CC the rate of homologous recombination in plants, improving plant tolerance
CC to extreme osmotic conditions or to pathogens or pests, improving yield
CC by modification of photosynthesis, modifying seed oil or protein yield
CC and/or content, improving yield by modification of carbohydrate, nitrogen
CC or phosphorus use and/or uptake, or improving yield by providing improved
CC plant growth and development under at least one stress condition. The
CC polynucleotide and polypeptide may also be used in recombinant DNA
CC constructs, in physical arrays of molecules, as plant breeding markers,
CC or in computer-based storage and analysis systems. The present sequence
CC is a Cotton plant cDNA of the invention. NOTE: The sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from USPTO at
CC seqdata.uspto.gov/sequences.html?docID=20040181830. However only 6585
CC polynucleotide sequences were available, the remaining 5213
CC polynucleotides and all 58798 protein sequences were not present.

XX PT New isolated or recombinant polypeptide for use in modulating a plant
PT growth trait in a flowering plant e.g. in Arabidopsis, Brassica, Zea, or
PT Oryza.
XX PS Claim 1; SEQ ID NO 12; 81pp; English.
XX CC The invention describes an isolated or recombinant polypeptide (I)
CC comprising a sequence: (a) comprising 1 of 30 sequences (S1), as given in
CC the specification, or a conservative variant; (b) encoded by 1 of 30
CC sequences (S2), as given in the specification, or a conservative variant;
CC (c) encoded by a sequence that hybridises under stringent conditions to
CC S2; and (d) encoded by a sequence 70 % identical to S2. The expression or
CC activity of (I) is modulated to modulate a plant growth trait in a
CC flowering plant, of the family Brassicaceae, preferably in a plant that
CC is Arabidopsis, Brassica, Zea, Oryza, Triticum, Hordeum, Lolium, Sorghum,
CC Glycine, Medicago, Helianthus, Lactuca, Beta, Vitis, Solanum,
CC Lycopersicon, Capsicum, Gossypium, Hevea, Linum, Prunus, Citrus, Populus,
CC Pinus, or Quercus. A new method is used to detect genes for a plant
CC growth trait. This sequence represents a plant growth associated cDNA.

(HUMA-) HUMAN GENOME SCI INC.  
XX  
XX  
XX  
PI Rosen CA, Barash SC, Ruben SM;  
XX WPI; 2001-451937/48.  
XX  
XX Isolated polypeptide for treating, preventing and/ or prognosing  
PT disorders related to the musculoskeletal system including musculoskeletal  
PT cancers and also for testing and detection e.g. diagnosis.  
XX  
XX Example 2; SEQ ID NO 2903; 781pp + Sequence Listing; English.  
XX  
XX The invention relates to novel genes (AAL34669-AAL37666) and proteins  
CC (ABR03087-ABR04109) associated with the musculoskeletal system useful for  
CC preventing, treating or ameliorating medical conditions e.g. by protein  
CC or gene therapy. The genes are isolated from a range of human tissues  
CC disclosed in the specification. The nucleic acids, proteins, antibodies  
CC and (ant)agonists are useful in the diagnosis, treatment and prevention  
CC of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the  
CC adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver,  
CC lung, or urogenital; (b) immune disorders e.g. Addison's disease,  
CC

CC allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis,  
CC diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid  
CC arthritis and ulcerative colitis; (c) cardiovascular disorders such as  
CC myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g.  
CC cerebral anoxia and epilepsy; and (f) infectious diseases such as viral,  
CC bacterial, fungal and parasitic infections. Note: The sequence data for  
CC this patent did not form part of the printed specification, but was  
CC obtained in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

#### COMMENT

The sequence contained an oligo-dT track that was present in the oligonucleotide that was used to prime the synthesis of first strand cDNA and therefore this may represent a bonafide poly A tail. The sequence tag present in the cDNA between the NotI site and the oligo-dT track served to verify it as a clone from the normalized brain stems library cDNA library Preparation: M.B. Soares lab Clone distribution: NIH-BMAP cDNA clones will be made available by the means that is soon to be determined. When NIH determines the means for distribution of the BMAP cDNA clones, this record will be updated accordingly when that means is determined. The following repetitive elements were found in this cDNA sequence: 180-217, >POLY\_A\$implete  
 Seq primer: M13 Forward  
 POLYA=Yes.

/clone_lib="UI-R-CO"
/notes="Vector: pT7T3-Pac (Pharmacia) with a modified polylinker; Site 1: Not 1; Site 2: Eco RI; The UI-R-CO library is a subtracted library derived from the UI-R-A1 and UI-R-E1 libraries. The UI-R-A1 library consisted of a mixture of individually tagged normalized libraries constructed from rat placenta, adult lung, brain, liver, kidney, heart, spleen, ovary, and muscle. The UI-R-E1 library consisted of a mixture of individually tagged normalized libraries constructed from 8, 12 and 18-day embryo. The tag is a string of 3-5 nucleotides present between the Not I site and the oligo-dr track which allows identification of the library of origin of a clone within the mixture. The subtracted library (UI-R-CO) was constructed as follows: PCR amplified cDNA inserts from a pool of UI-R-A1 and UI-R-E1 clones from which 3' ESTs had been derived was used as a driver in a hybridization with the pooled UI-R-A1 and UI-R-E1 library in the form of single-stranded circles. The remaining single-stranded circles (subtracted library) was purified by hydroxyapatite column chromatography, converted to double-stranded circles and electroporated into DH10B bacteria (Life Technologies) to generate the UI-R-CO library. This procedure has been previously described (Bonaldo, Lennon and Soares, Genome Research 6: 791-806, 1996)"

 /clone\_lib="Gm-r1088-7096"  
 /clone\_lib="Gm-r1088"  
 /notes="The library Gm-r1088 is a sequence-driven, reracked set of 9,216 low redundancy clones selected from cDNA libraries from various tissues and stages of development of soybean that consists of 2,706 cDNAs from germinating cotyledons (source library Gm-cl027); 1,355 cDNAs from immature seed coats (libraries Gm-cl019 and Gm-cl023); 917 cDNAs from tissue culture derived somatic embryos (source libraries Gm-cl036 and Gm-cl075); 3,275 cDNAs from germinating seedlings, shoot tips, or leaves exposed to various stresses (source libraries Gm-cl064, Gm-cl065, Gm-cl066, and Gm-cl067); and Gm-cl068); and 963 cDNAs from young leaves exposed to bacterial and fungal pathogens (source libraries Gm-cl072, Gm-cl073, and Gm-cl074). The 5' ESTs of the source clones from the different libraries was used to select singletons, or a representative of each contig, which were reracked to form library Gm-r1088 and the cDNA clones of the reracked Gm-r1088 library were then sequenced at the 3' end. The unigene selection and 3' sequencing was funded by NSF Plant Genome project #9872565 (http://soybeanomics.cropsci.uiuc.edu/) as part of creation of a low redundancy soybean cDNA set. The source cDNA libraries were constructed by the laboratories of Lila Vodkin, University of Illinois, Randy Shoemaker, Iowa State University, and Paul Keim, Northern Arizona University as part of the Public EST project, http://129.186.26.94/soybeanest.html. The contig analysis to select unique genes was performed by the laboratory of Ernest Retzel, Center for Computational Genomics and Bioinformatics, University of Minnesota, http://web.ahc.umn.edu/biodata/nfssoy/. Reracking and 3' sequencing were conducted by services of the University of Illinois Keck Center for Comparative and Functional Genomics http://www.biotech.uiuc.edu/keck.htm. Note: The corresponding 5' EST from each clone in the Gm-r1088 library is listed in the 'OTHER EST' field. The detailed information on the source library for each clone can also be obtained by referring to the Genome Systems clone ID of the original cDNA library that is also listed under 'OTHER EST'."

/note="Organ: hearts; Vector: pBluescript II KS(+);

Site 1: EcoRI; Site 2: NotI; This normalized library was

constructed from 1 million independent clones. cDNA

synthesis was initiated using an oligo(dT) primer, using

methylated C in the first strand synthesis reaction.

Following this first strand reaction, double-stranded cDNA

was blunted, ligated to NotI adapters, digested with

EcoRI, size-selected, and cloned into the NotI and EcoRI

compatible sites of a custom modified MCS of the

pBluescript (KS+) vector. The library was normalized in 2

rounds using conditions adapted from Soares et al., PNAS

(1994) 91: 9228-9232 and Bonaldo et al., Genome Research 6

(1996): 791, except that a significantly longer

reannealing hybridization was used."

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

3 (bases 1 to 243637)  
Rat Genome Sequencing Consortium.

Direct Submission  
Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:25008195. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Genome Center

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

Contact: hgsc-help@bcm.tmc.edu

----- Project Information

----- Center project name: GIEL

Center clone name: CH230-21612

----- Summary Statistics

Assembly program: Atlas 3.0;

Consensus quality: 223909 bases at least Q40

Consensus quality: 228092 bases at least Q30

Consensus quality: 231096 bases at least Q20

Estimated insert size: 238161; sum-of-contigs estimation

Quality coverage: 6x in Q20 bases; sum-of-contigs estimation

-----

\* NOTE: Estimated insert size may differ from sequence length

\* (see [http://www.hgsc.bcm.tmc.edu/docs/Genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)).

\* NOTE: This is a 'working draft' sequence. It currently

\* consists of 1 contigs. Gaps between the contigs

\* are represented as runs of N. The order of the pieces

\* is believed to be correct as given, however the sizes

\* of the gaps between them are based on estimates that have

\* provided by the submitter.

\* This sequence will be replaced

\* by the finished sequence as soon as it is available and

\* the accession number will be preserved.

\* 1 243637: contig of 243637 bp in length.

----- Project Information

Center project name: L11599

Center clone name: 58\_O3

\* NOTE: This record contains 32 individual  
 \* sequencing reads that have not been assembled into  
 \* contigs. Runs of N are used to separate the reads  
 \* and the order in which they appear is completely  
 \* arbitrary. Low-pass sequence sampling is useful for  
 \* identifying clones that may be gene-rich and allows  
 \* overlap relationships among clones to be deduced.  
 \* However, it should not be assumed that this clone  
 \* will be sequenced to completion. In the event that  
 \* the record is updated, the accession number will  
 \* be preserved.

 -----

This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

COMMENT

On Jun 28, 2005 this sequence version replaced gi:58037610.  
The sequence in this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described  
in the feature table below represents a scaffold in the Atlas  
assembly (a 'contig-scaffold'). Within each contig-scaffold,  
individual sequence contigs are ordered and oriented, and separated  
by sized gaps filled with Ns to the estimated size. The sequence  
may extend beyond the ends of the clone and there may be sequence  
contigs within a contig-scaffold that consist entirely of whole  
genome shotgun sequence reads. Both end sequences and whole genome  
shotgun sequence only contigs will be indicated in the feature  
table.

-----  
\* NOTE: Estimated insert size may differ from sequence length  
(see [http://www.hgsc.bcm.tmc.edu/docs/Genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 20 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

1 1302: contig of 1302 bp in length  
\* 1303 2070: gap of 768 bp  
\* 2071 4765: contig of 2635 bp in length  
\* 4766 4815: gap of 50 bp  
\* 4816 22885: contig of 18070 bp in length  
\* 22886 22936: gap of 50 bp

* NOTE: This is a 'working draft' sequence. It currently
* consists of 34 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submittor.

3 (bases 1 to 227115)
Cow Genome Sequencing Consortium.
Direct Submission
Submitted (01-JUL-2005) Human Genome Sequencing Center, Department
of Molecular and Human Genetics, Baylor College of Medicine, One
Baylor Plaza, Houston, TX 77030, USA
On Jun 26, 2005 this sequence version replaced gi:58038108.
The sequence in this assembly is a combination of BAC based reads
and whole genome shotgun sequencing reads assembled using Atlas
(http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described
in the feature table below represents a scaffold in the Atlas
assembly (a 'contig-scaffold'). Within each contig-scaffold,
individual sequence contigs are ordered and oriented, and separated
by sized gaps filled with Ns to the estimated size. The sequence
may extend beyond the ends of the clone and there may be sequence
contigs within a contig-scaffold that consist entirely of whole
genome shotgun sequence reads. Both end sequences and whole genome
shotgun sequence only contigs will be indicated in the feature
table.

----- Genome Center
Center: Baylor College of Medicine
Center code: BCM
Web site: http://www.hgsc.bcm.tmc.edu/
Contact: hgsc-help@bcm.tmc.edu
----- Project Information
Center project name: FAXC
Center clone name: CH240-1K11
----- Summary Statistics
Assembly program: Atlas 3.0;
Consensus quality: 213949 bases at least Q40
Consensus quality: 216851 bases at least Q30
Consensus quality: 219286 bases at least Q20
Estimated insert size: 214671; sum-of-contigs estimation
Quality coverage: 5x in Q20 bases; sum-of-contigs estimation

-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 29 contigs. The true order of the pieces
* is not known and their order in this sequence record is
* arbitrary. Gaps between the contigs are represented as
* runs of N, but the exact sizes of the gaps are unknown.
* This record will be updated with the finished sequence
* as soon as it is available and the accession number will
* be preserved.
* 1 3732: contig of 3732 bp in length
* 3733 3782: gap of 50 bp
* 3783 7703: contig of 3921 bp in length
* 7704 7703: gap of unknown length
* 7804 10239: contig of 2436 bp in length
* 10240 10289: gap of 50 bp

```

-----  
 This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one pUC18 subclone; and the assembly was confirmed by restriction digest.  
 -----

Neighboring sequence information:

This clone is overlapped by GSI-25117, GSI-287C17.

-----  
 Sequence Quality Assessment:

This entry has been annotated with sequence quality estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.

-----

NOTICE:  
This sequence was finished as follows unless otherwise noted:  
all regions were double stranded, sequenced with an alternate  
chemistry, or covered by high quality data (i.e., phred quality >=  
30); an attempt was made to resolve all sequencing problems, such  
as compressions and repeats; all regions were covered by sequence  
from more than one subclone; and the assembly was confirmed by  
restriction digest.  
MAPPING INFORMATION:  
Mapping information for this clone was provided by Dr. Wes Warren,  
Department of Genetics, Washington University, St. Louis MO. For  
additional information about the map position of this sequence, see

http://genome.wustl.edu

SOURCE INFORMATION:

The RPCI-11 human BAC library was made from the blood of one male donor, as described by Oseogawa,K., Woon,P.Y., Zhao,B., Frengen,E., Tateno,M., Catanese,J.J. and de Jong,P.J. (1998) An improved approach for construction of bacterial artificial chromosome libraries. Genomics 51:1-8. The clone may be obtained either from Research Genetics, Inc. (http://www.resgen.com) or Pieter de Jong and coworkers at http://www.chori.org  
VECTOR: pBACe3.6

NEIGHBORING SEQUENCE INFORMATION:

The clone sequenced to the left is RP11-559M23; the clone sequenced to the right is RP11-194L1. Actual start of this clone is at base position 1 of RP11-2415; actual end is at base position 168813 of RP11-2415.

COMMENT

CLONE LENGTH: This sequence does not necessarily represent the

entire insert of this clone. Overlapping regions of clones are only

sequenced and submitted once, so the sequence for the remainder of

the insert may be found in the record for the adjacent clones.

Overlapping clones are noted at the beginning and end of the

Features listing.

ANNOTATION OF FEATURES:

STSS are identified using ePCR (Genome Res. 7:541-550) searches

of a local database that includes entries from dbSTS, GDB, and

local mapping efforts.

Repeats are identified using RepeatMasker (A. Smit and P. Green,

unpublished.) for Human and Mouse sequences.

Genes and Region of sequence similarity are identified by BLAST

(Nuc. Acids Res. 25:3389-3402) similarity (expect < 1e-34) to the EST and cDNA sequences. Genes demonstrate at least two exons flanked by consensus splice sites that maintained sequence continuity across the splice junctions. Sequences that are not identical matches are annotated as similar.

SEQUENCING READ COVERAGE: Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality for a region does not meet this standard, it will be indicated in the annotation as Low Coverage.

QUALITY OF INDIVIDUAL BASES: This sequence meets stringent quality standards - estimated error rate less than 1 per 10,000 bases. Reports of lowest quality individual bases and measures of base quality are listed below. Description of the metrics can be found at URL: <http://gc.bcm.tmc.edu:8088/quality.info/genbank.annotation.html>.

-----

\* NOTE: This record contains 69 individual  
 \* sequencing reads that have not been assembled into  
 \* contigs. Runs of N are used to separate the reads  
 \* and the order in which they appear is completely  
 \* arbitrary. Low-pass sequence sampling is useful for  
 \* identifying clones that may be gene-rich and allows  
 \* overlap relationships among clones to be deduced.  
 \* However, it should not be assumed that this clone  
 \* will be sequenced to completion. In the event that  
 \* the record is updated, the accession number will  
 \* be preserved.

## COMMENT

Submitted (02-DEC-2004) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: zfish-help@sanger.ac.uk Clone requests: http://www.sanger.ac.uk/Projects/D\_rerio/faq.shtml#dataeight On Jun 25, 2003 this sequence version replaced gi:32169125.

----- Genome Center

Center: Wellcome Trust Sanger Institute  
Center code: SC  
Web site: http://www.sanger.ac.uk  
Contact: zfish-help@sanger.ac.uk

-----

The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP database can be found at http://www.sanger.ac.uk/Projects/C\_elegans/wormpep/Clone-derived Zebrafish pUC subclones occasionally display inconsistency over the length of mononucleotide A/T runs and conserved TA repeats. Where this is found the longest good quality representation will be submitted.

CH211-272H10 is from a CHORI-211 BAC library  
VECTOR: pTARBAC2.1

This sequence was finished as follows unless otherwise noted: all

regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.

Any regions longer than 1kb tagged as misc-feature 'unsure' are part of a tandem repeat of more than 10kb in length where it has not been possible to anchor the base differences between repeat copies. The region has been built up based on the repeat element to match the total size of repeat indicated by restriction digest, but repeat copies may not be in the correct order and the usual finishing criteria may not apply.

Center: Baylor College of Medicine  
Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>  
Drafting Center Code: BCM  
Contact: hgsc-help@bcm.tmc.edu  
----- Project Information  
Center project name: HCQ1  
Center clone name: RP11-412M2  
----- Summary Statistics  
Sequencing vector: Plasmid;  
Chemistry: Dye-terminator Big Dye; 100% of reads  
Assembly program: Phrap; version 0.990329  
Consensus quality: 131977 bases at least Q40  
Consensus quality: 14820 bases at least Q30  
Consensus quality: 150638 bases at least Q20  
Estimated insert size: 3481; sum-of-contigs estimation  
Quality coverage: 0x in Q20 bases; sum-of-contigs estimation  
-----  
\* NOTE: Estimated insert size may differ from sequence length  
\* (see [http://www.hgsc.bcm.tmc.edu/docs/Genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 31 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence.  
\* as soon as it is available and the accession number will  
\* be preserved.  
\*  
\* 1 2113: contig of 2113 bp in length  
\* 2114 2213: gap of unknown length  
\* 2214 4755: contig of 2362 bp in length  
\* 4576 4675: gap of unknown length  
\* 4676 6855: contig of 2180 bp in length  
\* 6856 9483: gap of unknown length  
\* 9484 9583: contig of 2528 bp in length  
\* 9584 11332: gap of unknown length  
\* 11333 11733: gap of unknown length  
\* 11733 13905: contig of 2173 bp in length  
\* 13906 14005: gap of unknown length  
\* 14006 16168: contig of 2063 bp in length  
\* 16169 18363: gap of unknown length  
\* 18364 18463: gap of unknown length  
\* 18464 20771: contig of 2208 bp in length  
\* 20772 22976: contig of 2205 bp in length  
\* 22977 23076: gap of unknown length  
\* 23077 25231: contig of 2154 bp in length  
\* 25232 28408: gap of unknown length  
\* 28409 31188: contig of 3078 bp in length  
\* 31189 31288: gap of unknown length  
\* 31289 33857: contig of 2680 bp in length  
\* 33858 33957: gap of unknown length  
\* 33958 35993: contig of 2036 bp in length  
\* 35994 40174: gap of unknown length  
\* 40175 40274: contig of 4081 bp in length  
\* 40275 43333: gap of unknown length  
\* 43334 43433: contig of 3059 bp in length  
\* 43434 45838: gap of unknown length  
\* 45839 45938: contig of 2405 bp in length  
\* 45939 48604: gap of unknown length  
\* 48605 48704: contig of 2666 bp in length  
\* 48705 51037: gap of unknown length  
\* 51038 51137: contig of 2333 bp in length  
\* 51138 54665: gap of unknown length  
\* 54666 54765: contig of 3528 bp in length  
\* 54766 58612: gap of unknown length  
\* 58613 58712: contig of 3847 bp in length  
\* 58713 62606: contig of 3894 bp in length  
\* 62607 67021: gap of unknown length  
\* 67022 67021: contig of 4315 bp in length  
\* 67022 67021: contig of 4315 bp in length

Sequencing is completed to a minimum standard of double strand coverage with a minimum of 2 clones and 2 reads with no ambiguities or 2 chemistries with a minimum of 2 clones and 3 reads with no ambiguities. If the sequence quality does not meet this standard, it will be indicated in the annotation.

The repeat regions shown were identified using RepeatMasker by Adrian Smit.

Sequence similarities were identified using Powerblast by Jinghui Zhang.

Exon/Intron boundaries of identified genes were chosen if there were canonical splice junctions that maintained sequence continuity across the splice junctions.

**Sequence Quality Assessment:**

**Sequence Quality Assessment:**  
This entry has been annotated with sequence quality estimates computed by the Phrap assembly program. All manually edited bases have been reduced to quality 10. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.  
Base-by-base quality values are not generally visible from the GenBank flat file format but are available as part of this entry's ASN.1 file.

- \* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 8 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

*	1	8570:	contig of 8570 bp in length
*	8571	8670:	gap of unknown length
*	8671	36041:	contig of 27371 bp in length
*	36042	36141:	gap of unknown length
*	53289	53289:	contig of 17148 bp in length
*	53290	53389:	gap of unknown length
*	53390	80392:	contig of 27003 bp in length
*	80393	80492:	gap of unknown length
*	80943	109845:	contig of 29353 bp in length
*	109846	109945:	gap of unknown length
*	109946	126299:	contig of 16354 bp in length
*	126300	126399:	gap of unknown length
*	126400	136366:	contig of 9967 bp in length
*	136367	136466:	gap of unknown length
*	136467	155669:	contig of 19203 bp in length

[illegible]

**NOTICE:**

This sequence was finished as follows unless otherwise noted: all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by restriction digest.

and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at <http://www.chori.org>

## NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone. This clone is overlapped by AC140243.

TITLE  
JOURNAL  
COMMENT  
Direct Submission  
Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On Nov 15, 2002 this sequence version replaced gi:23808213.  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.  
----- Genome Center  
Center: Baylor College of Medicine  
Center code: BCM  
Web site: http://www.hgsc.bcm.tmc.edu/  
Contact: hgsc-help@bcm.tmc.edu  
----- Project Information  
Center project name: GWFF  
Center clone name: CH230-412B6  
----- Summary Statistics  
Assembly program: Phrap; version 0.990329  
Consensus quality: 152401 bases at least Q40  
Consensus quality: 154698 bases at least Q30  
Consensus quality: 155987 bases at least Q20  
Estimated insert size: 154442; sum-of-contigs estimation  
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation  
-----  
\* NOTE: Estimated insert size may differ from sequence length  
\* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank\_draft\_data.html).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 1 contigs. Gaps between the contigs  
\* are represented as runs of N. The order of the pieces  
\* is believed to be correct as given, however the sizes  
\* of the gaps between them are based on estimates that have  
\* provided by the submitter.  
\* This sequence will be replaced  
\* by the finished sequence as soon as it is available and  
\* the accession number will be preserved.  
\* 1 164792: contig of 164792 bp in length.

## NOTICE:

This sequence was finished as follows unless otherwise noted:  
 all regions were double stranded, sequenced with an alternate  
 chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by at least  
 one plasmid subclone, fosmid clone or direct clone walk sequence.  
 Sequence from the Mouse Genome Sequencing Consortium whole genome  
 shotgun may have been used to obtain the consensus sequence; and  
 the assembly was confirmed by restriction digest.

MAPPING INFORMATION:  
 Mapping information for this clone was provided by Dr. Wes Warren,  
 Department of Genetics, Washington University, St. Louis MO. For  
 additional information about the map position of this sequence, see  
 http://genome.wustl.edu

## SOURCE INFORMATION:

The RPCI-24 BAC Library has been constructed by Pieter de Jong and  
 coworkers (http://www.chori.org) from male C57BL/6J mouse spleen  
 and/or brain genomic DNA. The clone and detailed information can be  
 obtained from Pieter de Jong and coworkers at http://www.chori.org

## NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone. This clone is  
 overlapped by AC133946 and AL592112.

3 (bases 1 to 197966)  
Rat Genome Sequencing Consortium.

Direct Submission  
Submitted (09-OCT-2002) Human Genome Sequencing Center, Department  
of Molecular and Human Genetics, Baylor College of Medicine, One  
Baylor Plaza, Houston, TX 77030, USA

The sequence in this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(http://www.hgsc.bcm.tmc.edu/projects/rat/). As a result, the  
sequence may extend beyond the ends of the clone and there may be  
contigs that consist entirely of whole genome shotgun sequence  
reads. Both end sequences and whole genome shotgun sequence only  
contigs will be indicated in the feature table.

----- Summary Statistics  
Assembly program: Phrap; version 0.990329  
Consensus quality: 174221 bases at least Q40  
Consensus quality: 176932 bases at least Q30  
Consensus quality: 178502 bases at least Q20  
Estimated insert size: 150779; sum-of-contigs estimation  
Quality coverage: 3x in Q20 bases; sum-of-contigs estimation

\* NOTE: Estimated insert size may differ from sequence length  
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank\_draft\_data.html).  
\* NOTE: This is a 'working draft' sequence. It currently  
\* consists of 4 contigs. The true order of the pieces  
\* is not known and their order in this sequence record is  
\* arbitrary. Gaps between the contigs are represented as  
\* runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence  
\* as soon as it is available and the accession number will  
\* be preserved.

XX	Novel human genes and their expression products which are differentially expressed in different cell types.
XX	Claim 1; Page 712; 2479pp; English.
XX	The present invention describes a library of human polynucleotides comprising the sequences given in AAZ12532 to AAZ17779. Also described is a method of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample from a cell suspected of being cancerous, where the gene product is encoded by one of the 5248 polynucleotide sequences given in AAZ12532 to AAZ17779. The polynucleotides can be used as a source of primers and probes, which can be used for a variety of purposes, e.g. detection of expression levels, mapping, tissue typing or profiling, forensics, genetic analysis and detection of polymorphisms. Polypeptides encoded by the polynucleotides can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polynucleotides may also be used to construct arrays for diagnostics (which may be used to determine function of an encoded protein); and to detect differences in expression levels between two cells (e.g. to identify abnormal or diseased tissue in a human, to identify a genetic predisposition or susceptibility to a disease such as cancer). The polynucleotides of the invention are especially used in the diagnosis, prognosis and management of colorectal cancer, breast cancer, and lung cancer. The polynucleotides can also be used to screen for peptide analogues and antagonists

XX
XX Novel human genes and their expression products which are differentially
PT expressed in different cell types.
XX
XX Claim 1; Page 1511; 2479pp; English.
XX
XX The present invention describes a library of human polynucleotides
CC comprising the sequences given in AA212532 to AA217779. Also described is
CC a method of detecting differentially expressed genes correlated with the
CC cancerous state of a mammalian cell, comprising detecting at least one
CC differentially expressed gene product in a test sample from a cell
CC suspected of being cancerous, where the gene product is encoded by one of
CC the 5248 polynucleotide sequences given in AA212532 to AA217779. The
CC polynucleotides can be used as a source of primers and probes, which can
CC be used for a variety of purpose, e.g. detection of expression levels,
CC mapping, tissue typing or profiling, forensics, genetic analysis and
CC detection of polymorphisms. Polypeptides encoded by the polynucleotides
CC can be used for raising antibodies for experimental, diagnostic and
CC therapeutic purposes. The polynucleotides may also be used to construct
CC arrays for diagnostics (which may be used to determine function of an
CC encoded protein); and to detect differences in expression levels between
CC two cells (e.g. to identify abnormal or diseased tissue in a human, to
CC identify a genetic predisposition or susceptibility to a disease such as
CC cancer). The polynucleotides of the invention are especially used in the
CC diagnosis, prognosis and management of colorectal cancer, breast cancer,
CC and lung cancer. The polynucleotides can also be used to screen for
CC peptide analogues and antagonists

XX  
XX preventing obesity, multiple sclerosis, allergy, cancers, hemophilia,

XX  
XX stroke or infections.

XX  
XX Claim 20; Page 373-375; 586pp; English.

XX  
XX The invention describes a new isolated polypeptide (NOVX). The NOVX

XX  
XX polypeptide, nucleic acid and antibody are useful as therapeutics,

XX  
XX particularly in the manufacture of a medicament for treating a syndrome

XX  
XX associated with a human disease, which includes a pathology associated

XX  
XX with NOVX polypeptide. The DNA encoding the protein is useful in gene

XX  
XX therapy for treating the disease or condition. In particular, the NOVX

XX  
XX polypeptide or polynucleotide is useful for treating endocrine/

XX  
XX metabolism-related diseases (e.g. obesity or diabetes), central nervous

XX  
XX system disorders (e.g. Alzheimer's disease, Parkinson's disease,

XX  
XX epilepsy, multiple sclerosis, schizophrenia or depression), autoimmune

XX  
XX and inflammatory disorders (e.g. psoriasis, allergy, lupus erythematosus,

XX  
XX asthma, inflammatory bowel disease, rheumatoid arthritis or

XX  
XX osteoarthritis), cancers (e.g. colon, lung, liver, breast, ovarian,

XX  
XX prostate or brain cancers, or melanoma), liver diseases (e.g. liver

XX  
XX cirrhosis), lung diseases (emphysema or obstructive pulmonary disease),

XX  
XX haemophilia, stroke, or infections (e.g. viral, bacterial or parasitic).

XX  
XX These are also useful in developing powerful assay system for functional

XX  
XX analysis of various human disorders, as well as in diagnostic

XX  
XX applications, and for monitoring the effects of drugs during clinical

XX  
XX trials. This sequence encodes a novel human NOV protein

PT New composition comprising two or more isolated polypeptides, useful for  
PT preparing a medicament for treating pain in an animal.

PS Claim 1; Page; 1017pp; English.

XX The invention discloses a composition comprising two or more isolated rat  
CC or human polynucleotides or a polynucleotide which represents a fragment,  
CC derivative or allelic variation of the nucleic acid sequence. Also  
CC claimed are a vector comprising the novel polynucleotide, a host cell  
CC comprising the vector, a method for identifying a nucleotide sequence  
CC which is differentially regulated in an animal subjected to pain and a  
CC kit to perform the method, an array, a method for identifying an agent  
CC that increases or decreases the expression of the polynucleotide sequence  
CC that is differentially expressed in neuronal tissue of a first animal  
CC subjected to pain, a method for identifying a compound which regulates  
CC the expression of a polynucleotide sequence which is differentially  
CC expressed in an animal subjected to pain, a method for identifying a  
CC compound that regulates the activity of one or more of the  
CC polynucleotides, a method for producing a pharmaceutical composition, a  
CC method for identifying a compound or small molecule that regulates the  
CC activity in an animal of one or more of the polypeptides given in the  
CC specification, a method for identifying a compound useful in treating  
CC pain and a pharmaceutical composition comprising the one or more  
CC polypeptides or their antibodies. The polynucleotide or the compound that  
CC modulates its activity is useful for preparing a medicament for treating  
CC pain (e.g. spinal segmental nerve injury (Chung), chronic constriction  
CC injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene  
CC therapy). The sequence presented is a rat DNA (shown in Table 2 of the  
CC specification) which encodes one of the polypeptides of the invention  
CC which is differentially expressed during pain. Note: The sequence data  
CC for this patent did not form part of the printed specification, but was  
CC obtained in electronic form directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

XX  
XX New recombinant DNA construct, useful for improving plant tolerance to  
PT cold, heat, drought, herbicides, extreme osmotic conditions, pathogens or  
PT pests, for conferring increased resistance to plant disease, or for  
PT improving yield.  
XX  
XX Claim 1; SEQ ID NO 13369; 15pp; English.  
XX  
XX The invention describes a recombinant DNA construct comprising a  
CC polynucleotide consisting of a sequence encoding an amino acid sequence  
CC available in electronic form from the US patent office at  
CC ftp.segdata.uspto.gov/sequence.html?DocID:2004034888. The polynucleotide  
CC of the invention are also useful in physical arrays of molecules and as  
CC plant breeding markers. The recombinant DNA construct is useful for  
CC improving plant tolerance to cold, heat, drought, herbicides, extreme  
CC osmotic conditions, pathogens or pests, for manipulating growth rate in  
CC plant cells by modification of the cell cycle pathway, for conferring  
CC increased resistance to plant disease, for producing galactomannan,  
CC lignin or plant growth regulators, for increasing the rate of homologous  
CC recombination in plants, for improving yield by modification of  
CC photosynthesis or carbohydrate, nitrogen or phosphorus use and/or uptake  
CC or by providing improved plant growth and development under at least one  
CC stress condition or for modifying seed oil or protein yield and/or  
CC content. This sequence represents a plant full length insert  
CC polynucleotide that can be used in the recombinant DNA construct of the  
CC invention.

XX  
XX New recombinant DNA construct comprising a promoter positioned to provide  
PT for expression of a polynucleotide encoding a polypeptide from a  
PT microbial source, useful for producing plants with improved properties.  
XX  
XX Claim 1; SEQ ID NO 24074; 122pp; English.  
XX  
XX The invention relates to a recombinant DNA construct comprising a  
CC promoter functional in a plant cell, where the promoter is positioned to  
CC provide for expression of a polynucleotide encoding a polypeptide from a  
CC microbial source. The invention also relates to a transformed plant  
CC comprising the recombinant DNA construct and a method of producing a  
CC transformed plant having an improved property. The plant is a crop plant  
CC such as maize or soybean. The method of producing a transformed plant  
CC having an improved property comprises transforming a plant with the  
CC recombinant DNA construct and growing the transformed plant, where the  
CC polynucleotide or polypeptide is useful for improving plant properties.  
CC The recombinant DNA construct is useful for producing plants with  
CC improved plant properties, e.g. improved cold, heat or drought tolerance,  
CC tolerance to herbicides, extreme osmotic conditions, pathogens or pests,  
CC increased resistance to plant disease, better growth rate by modification  
CC of the cell cycle pathway with plant growth regulators, increased rate of  
CC homologous recombination, modified seed oil or protein yield and/or  
CC content, improved yield by modification of carbohydrate, nitrogen or  
CC phosphorus use and/or uptake, by modification of photosynthesis or by  
CC providing improved plant growth and development under at least one stress  
CC condition, improved lignin production or improved galactomannan  
CC production. This sequence represents a bacterial polynucleotide used in  
CC the scope of the invention. Note: The sequence data for this patent did  
CC not form part of the printed specification but was obtained in electronic  
CC format from USPTO at segdata.uspto.gov/sequence.html.

XX  
XX The invention relates to novel foetal urogenital sinus-derived expressed  
CC sequence tags. The invention more specifically comprises an isolated  
CC polynucleotide comprising a nucleotide sequence containing a urogenital  
CC sinus-derived expressed sequence tag (EST) comprising g092, ug093, ug101,  
CC ug102, ug106, ug120, ug254, ug291, ug307, ug308, ug311, ug317, ug320,  
CC ug334, ug335, ug353, ug354, ug357, ug440, ug441, ug482, ug484, ug485,  
CC ug491, ug493, ug494, ug503, ug505, ug506, ug518, ug5186 and ug5194. The

CC urogenital sinus-derived expressed sequence tags have cytostatic and anti  
CC -inflammatory activities. The genes containing urogenital sinus-derived  
CC ESTs encode oncofetal proteins that are useful for diagnosis of prostate  
CC disease and for monitoring the efficacy of a compound in clinical trials  
CC for the treatment of prostate disease. The ESTs can be used in assays to  
CC identify substances (e.g. triple helix forming oligonucleotides,  
CC antisense oligonucleotides, ribozymes or antibodies) useful for treating  
CC prostate disease, such as prostatitis and benign or malignant growth of  
CC the prostate gland. This polynucleotide sequence represents the cDNA of a  
CC urogenital sinus-derived expressed sequence tag of the invention.

XX New human genome-derived single exon nucleic acid probes useful for human  
PT gene expression analysis, for identifying or characterizing alternative  
PT splicing events, for assessing genomic alterations or as tools for  
PT surveying tissues.  
XX  
XX Claim 15; SEQ ID NO 2155; 80pp; English.  
XX  
XX The invention relates to a nucleic acid probe for measuring human gene  
CC expression, comprising any of the 27,400 fully defined nucleotide  
CC sequences in the specification, or their complements or fragments, and  
CC encoding at least 8 amino acids of any of the 6888 amino acid sequences  
CC fully defined in the specification. The probe is a single exon probe that  
CC hybridizes under high stringency conditions to a nucleic acid molecule  
CC expressed in human cells or tissues. Also included are a spatially-  
CC addressable set of single exon nucleic acid probes for measuring human  
CC gene expression (comprising a plurality of single exon nucleic acid  
CC probes cited above, where each of the plurality of probes is separately  
CC and addressably isolatable or amplifiable from the plurality), a single  
CC exon microarray for measuring human gene expression, a method of  
CC measuring human gene expression, a vector comprising the single exon  
CC probe cited above, an ORF-encoded peptide comprising at least 8  
CC contiguous amino acids of any of the above-mentioned amino acid  
CC sequences (optionally with conservative amino acid substitutions), an  
CC isolated antibody that binds specifically to a peptide cited above,  
CC methods of selling and/or licensing single exon probes or microarrays to  
CC a customer desiring to measure gene expression, a method of providing  
CC human gene expression data by subscription, and a computer-readable  
CC storage medium which contains a database having a plurality of records  
CC (each record including data on the expression of a single exon probe  
CC cited above. The probe, methods and apparatus are useful in gene  
CC expression analysis. The probes may be used as tools for surveying  
CC tissues to detect the presence of expressed messages that contain their  
CC specific exon, or in constructing genome-derived single exon microarrays.  
CC In addition, the probes are used in identifying and characterising  
CC alternative splicing events, in detecting and characterising gross  
CC alterations in the genomic locus that includes their exon, in assessing  
CC smaller genomic alterations, in priming the synthesis of nucleic acids,  
CC or in expressing the ORF-encoded peptide. The present sequence is a human  
CC single exon probe of the invention. Note: The sequence data for this  
CC patent did not form part of the printed specification, but was obtained  
CC in electronic format directly from USPTO at  
CC seqdata.uspto.gov/sequence.html?DocID=20030194704

XX  
CC The present invention describes primer sets for synthesizing 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprising a sequence complementary to a polynucleotide which comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesizing polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. XX  
PS Claim 1; SEQ ID NO 4237; 7273pp; English.  
XX  
CC The invention relates to human tumour-associated antigenic target (TAT) polypeptides, and their related nucleic acids. The TAT polypeptides are overexpressed in cancer tissues compared to normal tissues, and may thus serve as effective targets for the diagnosis and treatment of cancer in mammals. The invention also relates to nucleic acid and polypeptide sequences at least 80% identical to the TAT nucleic acids and polypeptides; expression vectors and host cells comprising a TAT nucleic acid; an antibody specific for a TAT polypeptide; a peptide or organic molecule which binds to a TAT polypeptide; fusion proteins comprising a TAT polypeptide; and methods and compositions for the treatment or diagnosis of cancer in mammals. TAT polypeptides, nucleic acids, antibodies, antagonists, binding molecules and compositions are useful for diagnosing or treating a cell proliferative disorder associated with increased TAT expression, particularly cancers such as breast cancer, colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder cancer, pancreatic cancer, cervical cancer, cancers of the central nervous system, melanoma and leukaemia. TAT nucleic acids may further be used as hybridisation probes, in chromosome and gene mapping, in

CC chromosome identification and in gene therapy. The present sequence  
 CC represents a TAT nucleic acid of the invention

 PT prostate cancer or tumor.  
 XX  
 Claim 1; SEQ ID NO 4236; 7273pp; English.  
 XX  
 The invention relates to human tumour-associated antigenic target (TAT)  
 CC polypeptides, and their related nucleic acids. The TAT polypeptides are  
 CC overexpressed in cancer tissues compared to normal tissues, and may thus  
 CC serve as effective targets for the diagnosis and treatment of cancer in  
 CC mammals. The invention also relates to nucleic acid and polypeptide  
 CC sequences at least 80% identical to the TAT nucleic acids and  
 CC polypeptides; expression vectors and host cells comprising a TAT nucleic  
 CC acid; an antibody specific for a TAT polypeptide; a peptide or organic  
 CC molecule which binds to a TAT polypeptide; fusion proteins comprising a  
 CC TAT polypeptide; and methods and compositions for the treatment or  
 CC diagnosis of cancer in mammals. TAT polypeptides, nucleic acids,  
 CC antibodies, antagonists, binding molecules and compositions are useful  
 CC for diagnosing or treating a cell proliferative disorder associated with  
 CC increased TAT expression, particularly cancers such as breast cancer,  
 CC colorectal cancer, lung cancer, ovarian cancer, liver cancer, bladder  
 CC cancer, pancreatic cancer, cervical cancer, cancers of the central  
 CC nervous system, melanoma and leukaemia. TAT nucleic acids may further be

CC used as hybridisation probes, in chromosome and gene mapping, in  
CC chromosome identification and in gene therapy. The present sequence  
CC represents a TAT nucleic acid of the invention

XX PT New 1995 cDNA, useful for treating osteoporosis, neurological diseases,  
PT Alzheimer's diseases, Parkinson's diseases, dementia and various cancers.

XX PS Claim 1; SEQ ID NO 571; 2686pp; English.

XX CC This invention relates to novel, isolated full length human cDNA  
CC molecules and the encoded proteins thereof. Specifically, it refers to  
CC cDNA clones obtained by an oligo-capping method, where none of these  
CC clones are identical to any known human mRNAs. The present invention  
CC describes an immunoassay to identify agonists and antagonists, as well as  
CC antibodies, antisense molecules and siRNAs that can all be used to bind  
CC to and modulate expression of the cDNA molecules. As such, these  
CC molecules are useful for diagnostic markers or therapeutic targets for  
CC the various diseases or morbid states. In particular, they are useful in  
CC gene therapy for treating osteoporosis, neurological disease, Alzheimer's  
CC disease, Parkinson's disease, dementia, short memory and various cancers,  
CC as well as for maintaining equilibrium of sense or motor function, and  
CC for treating emotional reaction, fear response and panic. Accordingly,  
CC they exhibit osteopathic, neuroprotective, nootropic, antiparkinsonian,  
CC cytotstatic and tranquiliser activities. This polynucleotide is a full  
CC length human cDNA sequence of the invention. NOTE: This sequence is not  
CC given in the sequence listing of the specification but can be obtained on

CC CD-ROM from the European Patent Office, Vienna Sub-office.

XX PT Combination for diagnosing, staging, treating, or monitoring the  
PT progression of treatment of a vascular disease, e.g. atherosclerosis,  
PT comprises several cDNAs that are differentially expressed in activated  
PT vascular tissue.

XX PS Claim 1; Page; 18pp; English.

XX CC This invention relates to a combination comprising several cDNAs that are  
CC differentially expressed in activated vascular tissue. The invention also  
CC discloses a high throughput method for detecting differentially expressed  
CC cDNAs in a sample. The cDNAs of the invention may have  
CC antiatherosclerotic; cytotstatic; cardiant; hypotensive; antidiabetic;  
CC gynaecological; vasotropic and cerebroprotective activities and may be  
CC used in gene therapy. The cDNAs of the invention may be used in a high-  
CC throughput methods for detecting differential expression of one or more  
CC cDNAs in a sample, or screening several molecules or compounds to  
CC identify a molecule or compound that specifically binds a cDNA of the  
CC invention. A protein encoded by the cDNA may be used to screen several  
CC molecules or compounds to identify a ligand that specifically binds to  
CC the protein, or to produce or purify an antibody to the protein that can  
CC be used to detect a protein in a sample or purify a natural or  
CC recombinant protein from a sample. The nucleotides may be useful for  
CC diagnosing, staging, treating, or monitoring the progression of treatment  
CC of a vascular disease, e.g. atherosclerosis, cancer, coronary artery  
CC disease, hypertension, diabetes, pre-eclampsia, ischaemia- reperfusion  
CC injury, restenosis, or stroke. The cDNAs can also be used for large-scale  
CC genetic or gene expression analysis of several new nucleic acid

CC molecules. Antibodies to the proteins encoded by the cDNAs are useful for  
CC diagnosing pre-pathologic disorders, and chronic or acute diseases  
CC associated with abnormalities in the expression, amount or distribution  
CC of the protein. The present sequence represents a cDNA of the invention  
CC that is differentially expressed in activated vascular tissue. Note: The  
CC sequence data for this patent did not form part of the specification, but  
CC was obtained in electronic format directly from USPTO at

XX New genes regulated by MYCN activation, useful in gene therapy.  
PT Particularly for treating a subject with e.g. neuroblastoma or other  
PT cancers, or for diagnosing, staging or monitoring the treatment of the  
PT cancer.

PS Claim 1; SEQ ID NO 340; 27pp; English.

XX This invention relates to novel isolated cDNAs that are differentially  
CC expressed in MYCN activated cells. Specifically, it refers to  
CC polynucleotide sequences that exhibit differential expression patterns in  
CC cells activated by the transactivator MYCN, where MYCN is a proto-  
CC oncogene that is amplified in neuroblastoma cells and is common in small  
CC cell lung cancers. The present invention describes these cDNA molecules  
CC as useful for in hybridisation assays to detect expression of nucleic  
CC acids (or complementary nucleic acids) in a present in a given sample, as  
CC well as for screening assays by identifying molecules or compounds that  
CC specifically bind the cDNA as a ligand and modulate function or activity.  
CC Accordingly, these compositions exhibit cytostatic activity and can also  
CC be used for gene therapy purposes. This polynucleotide sequence is a cDNA  
CC that is differentially expressed in MYCN activated cells, given in an

CC exemplification of the invention. NOTE: This sequence does not appear in  
CC the printed specification but has been obtained in electronic format from  
CC the US Patent Office at  
CC <ftp://seqdata.uspto.gov/sequence.html?DocID=20030119009>.

XX
XX New recombinant nucleic acid encoding carcinoma associated protein,
PT useful for preparing compositions for treating carcinomas.
XX
XX Claim 1; SEQ ID NO 1295; 245pp; English.
XX
XX The invention relates to recombinant carcinoma associated (CA) nucleic
CC acid sequences from mouse and human (ADA01482-ADA03094), and to
CC recombinant carcinoma associated proteins (CAP) encoded by them. The
CC invention also encompasses expression vectors and host cells comprising a
CC CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC binds to the protein, and a biochip comprising CA nucleic acid or
CC fragments thereof. The sequences of the invention were identified using
CC oncogenic retroviruses, which insert into the genome of the host organism
CC at random. Many of these do not carry transduced host oncogenes or
CC pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC direct consequence of the effects of proviral integration into host
CC protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC leukaemia) or a propensity to carcinoma by determination of the sequence
CC of a CA gene, or by determination of CA gene expression in particular
CC tissues. CA nucleic acids, proteins and antibodies are also useful as
CC therapeutic agents and in screening and evaluating drug candidates. The
CC present sequence represents a specifically claimed murine CA nucleic acid
CC sequence of the invention. Note: The complete sequence data for this
CC patent did not form part of the printed specification, but was obtained
CC in electronic format directly from WIPO at
XX ftp.wipo.int/pub/published_pct_sequences.

```

CC acid, a recombinant protein, a method of screening for drug candidates, a  
CC method of screening for a bioactive agent capable of binding to a  
CC carcinoma associated protein (CAP) encoded by a nucleotide sequence, a  
CC method of screening for a bioactive agent capable of modulating the  
CC activity of a CAP, a method of evaluating the effect of a candidate  
CC carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting  
CC the activity of a CAP, a method of treating carcinomas, a method of  
CC neutralising the effect of a CAP and a method of diagnosing carcinoma or  
CC propensity to carcinoma. A method of evaluating the effect of a candidate  
CC carcinoma drug comprises administering the drug to a patient, removing a  
CC cell sample from the patient and determining alterations in the  
CC expression or activation of a gene comprising the nucleotide sequence. A  
CC method of diagnosing carcinoma comprises determining the expression of  
CC one or more genes comprising the nucleic acid sequence in a first tissue  
CC type of a first individual and comparing the expression of the gene from  
CC a second normal tissue type from the first individual or a second  
CC unaffected individual, where a difference in the expression indicates  
CC that the first individual has carcinoma. A method of inhibiting the  
CC activity of a CAP comprises binding an inhibitor to the CAP. Treating  
CC carcinomas comprises administering to a patient an inhibitor of CAP.  
CC Neutralising the effect of a CAP comprises contacting an agent specific  
CC for the CAP. The polypeptide specifically binds to the protein encoded by  
CC the nucleic acid. It comprises an antibody that specifically binds to the  
CC protein encoded by the nucleic acid. The nucleic acids are useful for  
CC preparing a composition for diagnosing or treating carcinoma e.g.,  
CC leukaemia or lymphoma. This sequence represents a murine carcinoma  
CC associated (CA) nucleic acid of the invention. Note: The sequence data  
CC for this patent did not form part of the printed specification but was  
CC obtained in electronic format directly from USPTO at  
CC seqdata.uspto.gov/sequence.html.

DR Recombinant nucleic acid useful for diagnosis and treatment of carcinoma  
PT comprises a nucleotide sequence.  
XX Claim 1; SEQ ID NO 1864; Opp; English.  
XX The present invention relates to novel DNA and protein sequences which  
CC are associated with carcinomas. The sequences are useful for: (i) for  
CC screening drug candidates; (ii) for screening of bioactive agent capable  
CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of  
CC a bioactive agent capable of modulating the activity of CAP; (iv) for  
CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing  
CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating  
CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;  
CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for  
CC determining Carcinoma Associated (CA) gene copy number. In addition, the  
CC CA genes are useful as DNA vaccines and the CAP are useful as markers of  
CC carcinoma including lymphoma. The present sequence is one such CA coding  
CC sequence. Note: This patent is an equivalent to basic patent  
CC US2002182586A1, for which no sequence data was published

XX Nucleic acid array useful for detecting cancer associated nucleic acid,  
PT comprises two or more nucleic acid probes.  
XX  
XX Disclosure; SEQ ID NO 134; 198pp; English.  
XX  
XX The invention relates to a nucleic acid array for detecting a cancer  
CC associated (CA) nucleic acid, comprising two or more nucleic acid probes.  
CC The invention also relates to a peptide array comprising two or more  
CC isolated polypeptides encoded by a CA nucleic acid sequence, a compound  
CC that binds to a polypeptide, an isolated antibody or its fragment which  
CC binds to a polypeptide, which is prepared by immunizing a host animal  
CC with a composition comprising the polypeptide or its antigen binding  
CC fragment and collecting cells from the host expressing antibodies against  
CC the antigen or its antigen binding fragment, a composition comprising the  
CC antibody and a carrier, a method of screening for anticancer activity, a  
CC method of detecting a CA nucleic acid, a method of diagnosing cancer, a  
CC method of treating cancer and a method of inhibiting expression of a CA  
CC nucleic acid in a cell. The CA nucleic acids are useful for detecting CA  
CC nucleic acids. The antibody is useful for detecting the presence or  
CC absence of cancer cells in an individual which involves contacting cells  
CC from the individual with the antibody and detecting a complex of a CA  
CC protein from the cancer cells and the antibody, where the detection of  
CC the complex correlates with the presence of cancer cells in the  
CC individual. The composition is useful for inhibiting growth of cancer  
CC cells in an individual or for delivering a therapeutic agent to cancer  
CC cells in an individual. The invention is also useful for diagnosing  
CC cancer, for treating cancer and for inhibiting expression of a CA gene in  
CC a cell. This sequence represents murine cancer-associated genomic DNA of  
CC the invention.

XX Claim 16; SEQ ID NO 16; 143pp; English.  
XX  
CC The present invention describes human cancer-associated (CA) nucleotide  
CC sequences (1). Also described: (1) an expression vector comprising (1);  
CC (2) a host cell comprising (1) or the expression vector; (3) a microarray  
CC for detecting a CA nucleic acid; (4) an isolated polypeptide encoded  
CC within an open reading frame of a CA sequence; (5) an isolated antibody,  
CC or its antigen binding fragment, that binds to the above polypeptide; (6)  
CC a hybridoma that produces the monoclonal antibody described above; (7) a  
CC pharmaceutical composition comprising the antibody and a pharmaceutical  
CC excipient; (8) a kit for detecting or diagnosing cancer cells, comprising  
CC the above (monoclonal) antibody or polynucleotide that selectively  
CC hybridizes to any of the polynucleotide sequences mentioned above; (9)  
CC methods for diagnosing cancer or for detecting the presence or absence of  
CC cancer cells in an individual; (10) a method for inhibiting growth of  
CC cancer cells in an individual; (11) a method for delivering a therapeutic  
CC agent to cancer cells in an individual; (12) an electronic library  
CC comprising the polynucleotide or polypeptide, or their fragments;  
CC mentioned above; (13) a method of screening for anticancer activity; (14)  
CC methods for detecting cancer associated with expression of a polypeptide  
CC or the presence of the antibody in a test cell or serum sample; (15) a  
CC method for screening for a bioactive agent capable of modulating the  
CC activity of a CA protein encoded by the above nucleic acid molecule; and  
CC (16) a method for treating cancers. (1) has cytostatic activity, and can  
CC be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,  
CC and as a G-protein coupled receptor antagonist. The compositions and  
CC methods of the present invention can be used for diagnosing, preventing  
CC and treating cancer, especially lymphomas. They may also be used in  
CC screening for agents that may be used for treating or preventing cancer.  
CC The present sequence represents a human CA gene sequence, which is given  
CC in the exemplification of the present invention. Note: The sequence data  
CC for this patent did not form part of the printed specification, but was  
CC obtained in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The sequence tag present in the cDNA between the NorI site and the  
oligo-dr track served to identify it as a clone from the normalized  
adult ovary library. cDNA library preparation: M. Fatima Bonaldo,  
Ph.D. Clone distribution: clones will be available through Research  
Genetics This clone is also available through the I.M.A.G.E.

/notes="Vector: pT7T3D-Pac (Pharmacia) with a modified  
polylinker; Site 1: Not 1; Site 2: Eco RI; The UI-R-C0  
library is a subtracted library derived from the UI-R-A1  
and UI-R-E1 libraries. The UI-R-A1 library consisted of a  
mixture of individually tagged normalized libraries  
constructed from rat placenta, adult lung, brain, liver,  
kidney, heart, spleen, ovary, and muscle. The UI-R-E1  
library consisted of a mixture of individually tagged  
normalized libraries constructed from 8, 12 and 18-day  
embryo. The tag is a string of 3-5 nucleotides present  
between the Not I site and the oligo-dT track which  
allows identification of the library of origin of a clone  
within the mixture. The subtracted library (UI-R-C0) was  
constructed as follows: PCR amplified cDNA inserts from a  
pool of UI-R-A1 and UI-R-E1 clones from which 3' ESTs had  
been derived was used as a driver in a hybridization with  
the pooled UI-R-A1 and UI-R-E1 library in the form of  
single-stranded circles. The remaining single-stranded  
circles (subtracted library) was purified by  
hydroxyapatite column chromatography, converted to  
double-stranded circles and electroporated into DH10B  
bacteria (Life Technologies) to generate the UI-R-C0  
library. This procedure has been previously described  
(Bonaldo, Lennon and Soares, Genome Research 6: 791-806,  
1996)"

/note="Vector: pCMV-SPORT6 (Invitrogen); Site 1: SalI;  
Site 2: NotI; Mouse cDNA project by the Laboratory of  
Genetics, National Institute on Aging (NIA), Intramural  
Research Program, NIH (<http://lgsun.grc.nia.nih.gov/cDNA>).  
This is a long-transcript enriched cDNA library (Ref.  
Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total  
RNAs were extracted from a pool of 3 embryos at 11.5-days  
postcoitum. Double-stranded cDNAs were synthesized with an  
Oligo(dT) primer [Invitrogen:  
5'-pGACTAGTCTAGATCGGAGCGCCGCTTTT-3'] from  
2ug of total RNA, treated with T4 DNA polymerase, and  
purified by ethanol-precipitation. The cDNAs were ligated  
to Loner-linker L1-Sal4, purified by phenol/chloroform, and  
separated from free linkers by Centricon 100. Then, the  
cDNAs were amplified by long-range high fidelity PCR using  
Ex Taq polymerase (Takara) with a primer Sal4-S. The  
products were purified by phenol/chloroform and Centricion  
100. The cDNAs were digested with SalI and NotI enzymes  
and cloned into SalI/NotI site of pCMV-SPORT6 plasmid  
vector. The DH10B E. coli host was transformed with the  
ligation mixture by the standard chemical method. The  
average insert size is about 3.3Kb. The library was  
constructed by Yulan Piao."

the JGI Clone Id and the direction of sequencing. The suffix '.rev' indicates a reverse sequencing read of the insert. It does not necessarily reflect the orientation of the insert.  
 Poly-A: Based upon the presence of a run of 14 or more T residues at the beginning of the sequence, this clone was polyadenylated.  
 The resulting Poly-T sequence has been removed.  
 Small Insert: Based upon one or more sequencing reads of this clone where vector sequence was present at both ends, this clone has been determined to contain a cDNA insert on the order of 600-1000 bases.  
 Plate: ANNN 0089 row: 4 column: 7  
 High quality sequence stop: 556  
 POLYA=Yes.

DNA Sequencing: DOE Joint Genome Institute: http://www.jgi.doe.gov
Naming Conventions: EST name is generated by the concatenation of
the JGI Clone Id and the direction of sequencing. The suffix '.fwd'
indicates a forward sequencing read of the insert. It does not
necessarily reflect the orientation of the insert.
Small Insert: Based upon one or more sequencing reads of this clone
where vector sequence was present at both ends, this clone has been
determined to contain a cDNA insert on the order of 600-1000 bases.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

SUMMARIES

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

----- Summary Statistics  
Center project name: M\_BB0458F14  
-----

**NOTICE:** This sequence may not represent the entire insert of this  
clone. It may be shorter because we only sequence overlapping  
clone sections once, or longer because we provide a small overlap  
between neighboring data submissions.

This sequence was finished as follows unless otherwise noted:  
all regions were double stranded, sequenced with an alternate  
chemistry, or covered by high quality data (i.e., phred quality >=  
30); an attempt was made to resolve all sequencing problems, such  
as compressions and repeats; all regions were covered by sequence  
from more than one subclone; and the assembly was confirmed by  
restriction digest.

#### MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren,  
Department of Genetics, Washington University, St. Louis MO. For  
additional information about the map position of this sequence, see  
<http://genome.wustl.edu>

#### SOURCE INFORMATION:

The RPCI-24 BAC Library has been constructed by Pieter de Jong and  
coworkers (<http://www.chori.org>) from male C57BL/6J mouse spleen  
and/or brain genomic DNA. The clone and detailed information can be  
obtained from Pieter de Jong and coworkers at <http://www.chori.org>

#### NEIGHBORING SEQUENCE INFORMATION:

This sequence is the entire insert of the clone. This clone is  
overlapped by AC134563 and AC127271.

 Contact: humquery@sanger.ac.uk  
 -----

During sequence assembly data is compared from overlapping clones.  
 Where differences are found these are annotated as variations  
 together with a note of the overlapping clone name. Note that the  
 variation annotation may not be found in the sequence submission  
 corresponding to the overlapping clone, as we submit sequences with  
 only a small overlap as described above.  
 This sequence was finished as follows unless otherwise noted: all  
 regions were either double-stranded or sequenced with an alternate  
 chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by at least  
 one plasmid subclone or more than one M13 subclone; and the  
 assembly was confirmed by restriction digest, except on the rare  
 occasion of the clone being a YAC.  
 The following abbreviations are used to associate primary accession  
 numbers given in the feature table with their source databases:  
 Em:, EMBL; Sw:, SWISSPROT; Tr:, TREMBL; Wp:, WORMPEP; Information

on the WORMPEP database can be found at  
[http://www.sanger.ac.uk/projects/C\\_elegans/wormpep](http://www.sanger.ac.uk/projects/C_elegans/wormpep) RP23-362B9 is  
 from the RPCI-23 Mouse BAC library  
 constructed by the group of Pieter de Jong.  
 For further details see <http://www.chori.org/bacpac/home.htm>  
 VECTOR: pBACE3.6.

COMMENT On Oct 10, 2004 this sequence version replaced gi:53850270.  
Sequence from the Mouse Genome Sequencing Consortium whole genome  
shotgun may have been used to confirm this sequence. Sequence data  
from the whole genome shotgun alone has only been used where it has  
a phred quality of at least 30.

 -----  
 During sequence assembly data is compared from overlapping clones.  
 Where differences are found these are annotated as variations  
 together with a note of the overlapping clone name. Note that the  
 variation annotation may not be found in the sequence submission  
 corresponding to the overlapping clone, as we submit sequences with  
 only a small overlap as described above.  
 This sequence was finished as follows unless otherwise noted: all  
 regions were either double-stranded or sequenced with an alternate  
 chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by at least  
 one plasmid subclone or more than one M13 subclone; and the  
 assembly was confirmed by restriction digest, except on the rare  
 occasion of the clone being a YAC.  
 The following abbreviations are used to associate primary accession  
 numbers given in the feature table with their source databases:  
 Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information  
 on the WORMPEP database can be found at  
 http://www.sanger.ac.uk/Projects/C\_elegans/wormpep/ RP24-87L14 is  
 from a Male (C57BL/6J) mouse BAC Library VECTOR: PTARBAC1.

## JOURNAL

Submitted (15-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

## COMMENT

On Nov 15, 2002 this sequence version replaced gi:23195560. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

----- Project Information

Center project name: L33591

Center clone name: 334\_D17

----- Summary Statistics

Sequencing vector: plasmid; n/a; 100% of reads

Chemistry: Dye-terminator Big Dye; 100% of reads

Assembly program: Phrap; version 0.960731

Consensus quality: 142838 bases at least Q40

Consensus quality: 142924 bases at least Q30

Consensus quality: 142955 bases at least Q20

Insert size: 200000; agarose-fp

Insert size: 142976; sum-of-contigs

Quality coverage: 11.4 in Q20 bases; agarose-fp

Quality coverage: 15.9 in Q20 bases; sum-of-contigs

-----  
\* NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown.  
\* This record will be updated with the finished sequence.  
\* as soon as it is available and the accession number will

\* be preserved.  
 \* 1 56560: contig of 56560 bp in length  
 \* 56561 56660: gap of unknown length  
 \* 56615 66715: contig of 9955 bp in length  
 \* 66616 66715: gap of unknown length  
 \* 66716 143176: contig of 76461 bp in length.

 COMMENT Sequence from the Mouse Genome Sequencing Consortium whole genome  
 shotgun may have been used to confirm this sequence. Sequence data  
 from the whole genome shotgun alone has only been used where it has  
 a phred quality of at least 30.  
 ----- Genome Center  
 Center: Wellcome Trust Sanger Institute  
 Center code: SC  
 Web site: http://www.sanger.ac.uk  
 Contact: humquery@sanger.ac.uk  
 -----  
 During sequence assembly data is compared from overlapping clones.  
 Where differences are found these are annotated as variations  
 together with a note of the overlapping clone name. Note that the

variation annotation may not be found in the sequence submission  
 corresponding to the overlapping clone, as we submit sequences with  
 only a small overlap as described above.  
 This sequence was finished as follows unless otherwise noted: all  
 regions were either double-stranded or sequenced with an alternate  
 chemistry or covered by high quality data (i.e., phred quality >= 30);  
 an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by at least  
 one plasmid subclone or more than one M13 subclone; and the  
 assembly was confirmed by restriction digest, except on the rare  
 occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession  
 numbers given in the feature table with their source databases:  
 Em: EMBL; Sw: SWISSPROT; Tr: TREMBL; Wp: WORMPEP; Information  
 on the WORMPEP database can be found at  
 http://www.sanger.ac.uk/Projects/C\_elegans/wormpep  
 from a Male (C57BL/6J) mouse BAC Library VECTOR: pTARBAC1.

During sequence assembly data is compared from overlapping clones.  
 Where differences are found these are annotated as variations  
 together with a note of the overlapping clone name. Note that the  
 variation annotation may not be found in the sequence submission  
 corresponding to the overlapping clone, as we submit sequences with  
 only a small overlap as described above.

This sequence was finished as follows unless otherwise noted: all  
 regions were either double-stranded or sequenced with an alternate  
 chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by at least  
 one plasmid subclone or more than one M13 subclone; and the  
 assembly was confirmed by restriction digest, except on the rare  
 occasion of the clone being a YAC.

The following abbreviations are used to associate primary accession  
 numbers given in the feature table with their source databases:  
 Em.: EMBL; Sw.: SWISSPROT; Tr.: TREMBL; Wp.: WORMPEP; Information  
 on the WORMPEP database can be found at  
[http://www.sanger.ac.uk/Projects/C\\_elegans/wormpep](http://www.sanger.ac.uk/Projects/C_elegans/wormpep) RP24-574J13 is  
 from a Male (C57BL/6J) mouse BAC Library VECTOR: pIARBAC1.

TITLE Direct Submission  
JOURNAL Submitted (25-NOV-2003) Wellcome Trust Sanger Institute, Hinxton, Cambridgeshire, CB10 1SA, UK. E-mail enquiries: humquery@sanger.ac.uk  
COMMENT humquery@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk  
On Nov 25, 2003 this sequence version replaced gi:38153729.  
Sequence from the Mouse Genome Sequencing Consortium whole genome shotgun map have been used to confirm this sequence. Sequence data from the whole genome shotgun alone has only been used where it has a phred quality of at least 30.  
----- Genome Center  
Center: Wellcome Trust Sanger Institute  
Center code: SC  
Web site: <http://www.sanger.ac.uk>  
Contact: humquery@sanger.ac.uk  
-----  
During sequence assembly data is compared from overlapping clones. Where differences are found these are annotated as variations together with a note of the overlapping clone name. Note that the variation annotation may not be found in the sequence submission corresponding to the overlapping clone, as we submit sequences with only a small overlap as described above.  
This sequence was finished as follows unless otherwise noted: all regions were either double-stranded or sequenced with an alternate chemistry or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by at least one plasmid subclone or more than one M13 subclone; and the assembly was confirmed by restriction digest, except on the rare occasion of the clone being a YAC.  
The following abbreviations are used to associate primary accession numbers given in the feature table with their source databases: Em: EMBL; Sw: SWISSPROT; Tr: TrEMBL; Wp: WORMPEP; Information on the WORMPEP database can be found at [http://www.sanger.ac.uk/Projects/C\\_elegans/wormpep](http://www.sanger.ac.uk/Projects/C_elegans/wormpep) RP23-376N23 is from the RPCI-23 Mouse BAC Library constructed by the group of Pieter de Jong.

Rat Genome Sequencing Consortium.  
Direct Submission  
Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA  
On Nov 19, 2002 this sequence version replaced gi:23908255.  
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole

Genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

```

----- Project Information
Center project name: GVUO
Center clone name: CH230-245G5
----- Summary Statistics
Assembly program: Phrap; version 0.990329
Consensus quality: 182925 bases at least Q40
Consensus quality: 183784 bases at least Q30
Consensus quality: 184265 bases at least Q20
Estimated insert size: 188977; sum-of-contigs estimation
Quality coverage: 6x in Q20 bases; sum-of-contigs estimation
-----
* NOTE: Estimated insert size may differ from sequence length
* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
* NOTE: This is a 'working draft' sequence. It currently
* consists of 1 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 190928: contig of 190928 bp in length.

TITLE Direct Submission
JOURNAL Submitted (14-MAR-2002) Wellcome Trust Sanger Institute, Hinxton,
Cambridgeshire, CB10 1SA, UK. E-mail enquiries:
hunquerry@sanger.ac.uk Clone requests: clonerequest@sanger.ac.uk
On Mar 21, 2002 this sequence version replaced gi:18476682.
During sequence assembly data is compared from overlapping clones.
Where differences are found these are annotated as variations
together with a note of the overlapping clone name. Note that the
variation annotation may not be found in the sequence submission
corresponding to the overlapping clone, as we submit sequences with
only a small overlap as described above.
This sequence was finished as follows unless otherwise noted: all
regions were either double-stranded or sequenced with an alternate
chemistry or covered by high quality data (i.e., phred quality >=
30); an attempt was made to resolve all sequencing problems, such
as compressions and repeats; all regions were covered by at least
one plasmid subclone or more than one M13 subclone; and the
assembly was confirmed by restriction digest. The following
abbreviations are used to associate primary accession numbers given
in the feature table with their source databases: Em; EMBL; Swi;
SWISSPROT; Tr; TrEMBL; Wp; WORMPEP; Information on the WORMPEP
database can be found at

-----
* NOTE: This is a 'working draft' sequence. It currently
* consists of 1 contigs. Gaps between the contigs
* are represented as runs of N. The order of the pieces
* is believed to be correct as given, however the sizes
* of the gaps between them are based on estimates that have
* been provided by the submitter.
* This sequence will be replaced
* by the finished sequence as soon as it is available and
* the accession number will be preserved.
* 1 205459: contig of 205459 bp in length.

 -----  
 During sequence assembly data is compared from overlapping clones.  
 Where differences are found these are annotated as variations  
 together with a note of the overlapping clone name. Note that the  
 variation annotation may not be found in the sequence submission  
 corresponding to the overlapping clone, as we submit sequences with  
 only a small overlap as described above.  
 This sequence was finished as follows unless otherwise noted: all

regions were either double-stranded or sequenced with an alternate  
 chemistry or covered by high quality data (i.e., phred quality >=  
 30); an attempt was made to resolve all sequencing problems, such  
 as compressions and repeats; all regions were covered by at least  
 one plasmid subclone or more than one M13 subclone; and the  
 assembly was confirmed by restriction digest. The following  
 abbreviations are used to associate primary accession numbers given  
 in the feature table with their source databases: Em., EMBL; Swi.,  
 SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information on the WORMPEP  
 database can be found at

[http://www.sanger.ac.uk/Projects/c\\_elegans/wormpep](http://www.sanger.ac.uk/Projects/c_elegans/wormpep) RP23-330D3 is

Center: Baylor College of Medicine

Center code: BCM

Web site: <http://www.hgsc.bcm.tmc.edu/>

Contact: [hgsc-help@bcm.tmc.edu](mailto:hgsc-help@bcm.tmc.edu)

Project Information

Center project name: GCTH

Center clone name: CH230-813

Summary Statistics

Assembly program: Atlas

Consensus quality: 205299 bases at least Q40

Consensus quality: 207638 bases at least Q30

Consensus quality: 208930 bases at least Q20

Estimated insert size: 216123; sum-of-contigs estimation

Quality coverage: 8x in Q20 bases; sum-of-contigs estimation

NOTE: Estimated insert size may differ from sequence length

(see [http://www.hgsc.bcm.tmc.edu/docs/Genbank\\_draft\\_data.html](http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html)).

NOTE: This is a 'working draft' sequence. It currently

consists of 3 contigs. The true order of the pieces

is not known and their order in this sequence record is

arbitrary. Gaps between the contigs are represented as

runs of N, but the exact sizes of the gaps are unknown.

  Sequence from the Mouse Genome Sequencing Consortium whole genome
  shotgun may have been used to confirm this sequence. Sequence data
  from the whole genome shotgun alone has only been used where it has
  a phred quality of at least 30.
  ----- Genome Center
  Center: Wellcome Trust Sanger Institute
  Center code: SC
  Web site: http://www.sanger.ac.uk
  Contact: humquery@sanger.ac.uk
  -----
  During sequence assembly data is compared from overlapping clones.
  Where differences are found these are annotated as variations
  together with a note of the overlapping clone name. Note that the
  variation annotation may not be found in the sequence submission
  corresponding to the overlapping clone, as we submit sequences with
  only a small overlap as described above.
  This sequence was finished as follows unless otherwise noted: all
  regions were either double-stranded or sequenced with an alternate
  chemistry or covered by high quality data (i.e. phred quality >=
  30); an attempt was made to resolve all sequencing problems, such
  as compressions and repeats; all regions were covered by at least
  one plasmid subclone or more than one M13 subclone; and the
  assembly was confirmed by restriction digest, except on the rare
  occasion of the clone being a YAC.
  The following abbreviations are used to associate primary accession
  numbers given in the feature table with their source databases:
  Em., EMBL; Sw., SWISSPROT; Tr., TREMBL; Wp., WORMPEP; Information
  on the WORMPEP database can be found at
  http://www.sanger.ac.uk/Projects/C_elegans/wormpep RP23-83023 is
  from the RPCI-23 Mouse BAC Library
  constructed by the group of Pieter de Jong.

of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 15, 2002 this sequence version replaced gi:23265039.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.

## Direct Submission

Submitted (10-MAY-2003) Human Genome Sequencing Center, Department  
of Molecular and Human Genetics, Baylor College of Medicine, One  
Baylor Plaza, Houston, TX 77030, USA

On May 10, 2003 this sequence version replaced gi:24635679.

The sequence in this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described  
in the feature table below represents a scaffold in the Atlas  
assembly (a 'contig-scaffold'). Within each contig-scaffold,  
individual sequence contigs are ordered and oriented, and separated  
by sized gaps filled with Ns to the estimated size. The sequence  
may extend beyond the ends of the clone and there may be sequence  
contigs within a contig-scaffold that consist entirely of whole  
genome shotgun sequence reads. Both end sequences and whole genome  
shotgun sequence only contigs will be indicated in the feature  
table.

On Nov 15, 2002 this assembly is a combination of BAC based reads  
and whole genome shotgun sequencing reads assembled using Atlas  
(<http://www.hgsc.bcm.tmc.edu/projects/rat/>). Each contig described  
in the feature table below represents a scaffold in the Atlas  
assembly (a 'contig-scaffold'). Within each contig-scaffold,  
individual sequence contigs are ordered and oriented, and separated  
by sized gaps filled with Ns to the estimated size. The sequence  
may extend beyond the ends of the clone and there may be sequence  
contigs within a contig-scaffold that consist entirely of whole  
genome shotgun sequence reads. Both end sequences and whole genome  
shotgun sequence only contigs will be indicated in the feature  
table.

XX New composition comprising two or more isolated polypeptides, useful for  
XX preparing a medicament for treating pain in an animal.  
XX Example 1; Page; 1017pp; English.  
XX The invention discloses a composition comprising two or more isolated rat  
XX or human polynucleotides or a polynucleotide which represents a fragment,  
XX derivative or allelic variation of the nucleic acid sequence. Also  
XX claimed are a vector comprising the novel polynucleotide, a host cell  
XX comprising the vector, a method for identifying a nucleotide sequence  
XX which is differentially regulated in an animal subjected to pain and a  
XX kit to perform the method, an array, a method for identifying an agent  
XX that increases or decreases the expression of the polynucleotide sequence  
XX that is differentially expressed in neuronal tissue of a first animal  
XX subjected to pain, a method for identifying a compound which regulates  
XX the expression of a polynucleotide sequence which is differentially  
XX expressed in an animal subjected to pain, a method for identifying a  
XX compound that regulates the activity of one or more of the  
XX polynucleotides, a method for producing a pharmaceutical composition, a  
XX method for identifying a compound or small molecule that regulates the  
XX activity in an animal of one or more of the polypeptides given in the  
XX specification, a method for identifying a compound useful in treating  
XX pain and a pharmaceutical composition comprising the one or more  
XX polypeptides or their antibodies. The polynucleotide or the compound that  
XX modulates its activity is useful for preparing a medicament for treating  
XX pain (e.g. spinal segmental nerve injury (Chung), chronic constriction  
XX injury (CCI) and spared nerve injury (SNI)) in an animal (e.g. gene  
XX therapy). The sequence presented is a human DNA (described in Table 3 of  
XX the Specification) which encodes one of the polypeptides of the invention  
XX which is differentially expressed during pain. Note: The sequence data  
XX for this patent did not form part of the printed specification, but was  
XX obtained in electronic form directly from WIPO at  
XX ftp.wipo.int/pub/published\_pct\_sequences.

XX Nucleic acid array useful for detecting cancer associated nucleic acid,  
XX comprises two or more nucleic acid probes.  
XX Disclosure; SEQ ID NO 666; 198pp; English.  
XX The invention relates to a nucleic acid array for detecting a cancer  
XX associated (CA) nucleic acid, comprising two or more nucleic acid probes.  
XX The invention also relates to a peptide array comprising two or more  
XX isolated polypeptides encoded by a CA nucleic acid sequence, a compound  
XX that binds to a polypeptide, an isolated antibody or its fragment which  
XX binds to a polypeptide, which is prepared by immunizing a host animal  
XX with a composition comprising the polypeptide or its antigen binding  
XX fragment and collecting cells from the host expressing antibodies against  
XX the antigen or its antigen binding fragment, a composition comprising the  
XX antibody and a carrier, a method of screening for anticancer activity, a  
XX method of detecting a CA nucleic acid, a method of inhibiting expression of a CA  
XX method of treating cancer and a method of inhibiting expression of a CA  
XX nucleic acid in a cell. The CA nucleic acids are useful for detecting CA  
XX nucleic acids. The antibody is useful for detecting the presence or  
XX absence of cancer cells in an individual and detecting a complex of a CA  
XX protein from the cancer cells and the antibody, where the detection of  
XX the complex correlates with the presence of cancer cells in the  
XX individual. The composition is useful for inhibiting growth of cancer  
XX cells in an individual or for delivering a therapeutic agent to cancer  
XX cells in an individual. The invention is also useful for diagnosing  
XX cancer, for treating cancer and for inhibiting expression of a CA gene in  
XX a cell. This sequence represents murine cancer-associated genomic DNA of  
XX the invention.

 PT comprises a nucleotide sequence.  
 PT  
 PS Claim 1; SEQ ID NO 745; Opp; English.  
 XX  
 XX The present invention relates to novel DNA and protein sequences which  
 CC are associated with carcinomas. The sequences are useful for: (i) for  
 CC screening drug candidates; (ii) for screening of bioactive agent capable  
 CC of binding to Carcinoma Associated Protein (CAP); (iii) for screening of  
 CC a bioactive agent capable of modulating the activity of CAP; (iv) for  
 CC evaluating the effect of a candidate carcinoma drug; (v) for diagnosing  
 CC carcinoma; (vi) for inhibiting the activity of CAP; (vii) for treating  
 CC carcinoma; (viii) for neutralizing the effect of CAP; (ix) as a biochip;  
 CC (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for  
 CC determining Carcinoma Associated (CA) gene copy number. In addition, the  
 CC CA genes are useful as DNA vaccines and the CAP are useful as markers of  
 CC carcinoma including lymphoma. The present sequence is one such CA coding  
 CC sequence. Note: This patent is an equivalent to basic patent  
 CC US2002182386A1, for which no sequence data was published

 XX New recombinant nucleic acid encoding carcinoma associated protein,  
 PT useful for preparing compositions for treating carcinomas.  
 PT  
 XX  
 PS Claim 1; SEQ ID NO 1547; 245pp; English.  
 XX  
 XX The invention relates to recombinant carcinoma associated (CA) nucleic  
 CC acid sequences from mouse and human (ADA01482-ADA03094), and to  
 CC recombinant carcinoma associated proteins (CAP) encoded by them. The  
 CC invention also encompasses expression vectors and host cells comprising a  
 CC CA nucleic acid, a polypeptide (especially an antibody) that specifically  
 CC binds to the protein, and a biochip comprising CA nucleic acid or  
 CC fragments thereof. The sequences of the invention were identified using  
 CC oncogenic retroviruses, which insert into the genome of the host organism  
 CC at random. Many of these do not carry transduced host oncogenes or  
 CC pathogenic trans-acting viral genes meaning that cancer incidence is a  
 CC direct consequence of the effects of proviral integration into host  
 CC protooncogenes. The CA nucleic acid sequences can be used to diagnose  
 CC carcinoma (especially breast cancer, prostate cancer, lymphoma or  
 CC leukaemia) or a propensity to carcinoma by determination of the sequence

CC of a CA gene, or by determination of CA gene expression in particular  
CC tissues. CA nucleic acids, proteins and antibodies are also useful as  
CC therapeutic agents and in screening and evaluating drug candidates. The  
CC present sequence represents a specifically claimed murine CA nucleic acid  
CC sequence of the invention. Note: The complete sequence data for this  
CC patent did not form part of the printed specification, but was obtained  
CC in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

XX PT New carcinoma associated gene or protein, useful for preparing a  
PT composition for diagnosing or treating carcinoma e.g., leukemia or  
PT lymphoma.

XX PS Claim 1; SEQ ID NO 295; 29pp; English.

XX The invention relates to new recombinant nucleic acids. The invention  
CC also relates to a host cell comprising a recombinant nucleic acid or  
CC expression vector, an expression vector comprising a recombinant nucleic  
CC acid, a recombinant protein, a method of screening for drug candidates, a  
CC method of screening for a bioactive agent capable of binding to a  
CC carcinoma associated protein (CAP) encoded by a nucleotide sequence, a  
CC method of screening for a bioactive agent capable of modulating the  
CC activity of a CAP, a method of evaluating the effect of a candidate  
CC carcinoma drug, a method of diagnosing carcinoma, a method for inhibiting  
CC the activity of a CAP, a method of treating carcinomas, a method of  
CC neutralising the effect of a CAP and a method of diagnosing carcinoma or  
CC propensity to carcinoma. A method of evaluating the effect of a candidate  
CC carcinoma drug comprises administering the drug to a patient, removing a  
CC cell sample from the patient and determining alterations in the  
CC expression or activation of a gene comprising the nucleotide sequence. A  
CC method of diagnosing carcinoma comprises determining the expression of  
CC one or more genes comprising the nucleic acid sequence in a first tissue  
CC type of a first individual and comparing the expression of the gene from  
CC a second normal tissue type from the first individual or a second  
CC unaffected individual, where a difference in the expression indicates  
CC that the first individual has carcinoma. A method of inhibiting the  
CC activity of a CAP comprises binding an inhibitor to the CAP. Treating  
CC carcinomas comprises administering to a patient an inhibitor of CAP.  
CC Neutralising the effect of a CAP comprises contacting an agent specific  
CC for the CAP. The polypeptide specifically binds to the protein encoded by  
CC the nucleic acid. It comprises an antibody that specifically binds to the  
CC protein encoded by the nucleic acid. The nucleic acids are useful for  
CC preparing a composition for diagnosing or treating carcinoma e.g.,  
CC leukaemia or lymphoma. This sequence represents a murine carcinoma  
CC associated (CA) nucleic acid of the invention. Note: The sequence data  
CC for this patent did not form part of the printed specification but was

```
CC obtained in electronic format directly from USPTO at

XX Producing a transgenic bird or fish for commercial use, comprises
XX transfecting a packaging cell line with retroviral construct, recovering
XX recombinant retrovirus from the cell and infecting bird or fish egg with
XX the recombinant virus.
XX Example 1; Fig 19; 68pp; English.
XX
XX The present invention describes a method for producing a transgenic bird
XX or fish. The method comprises transfecting a packaging cell line with a
XX retroviral construct, recovering recombinant retroviral particles from
XX the packaging cell line, and infecting a bird or a fish egg with the
XX recombinant retroviral particles. The retroviral construct comprises the
XX R and U5 sequences from a 5' lentiviral long terminal repeat (LTR) and a
XX self-inactivating 3' lentiviral LTR. Also described is a transgenic bird
XX or fish made by the above method and whose genome comprises a proviral
XX DNA that has a self-inactivating 3' lentiviral LTR. The method is useful
XX in producing transgenic animals, particularly transgenic birds and fish,
XX using retroviral constructs engineered to carry a transgene of interest.
XX The method is used to introduce the gene of choice into animals in order
XX to confer upon them desired attributes. The transgenic animals may find
XX use in commercial applications like biotechnology and agriculture. The
XX present sequence represents a murine lck promoter partial nucleotide
XX sequence, which is used in an example from the present invention

 XX New antisense nucleic acids, useful for identifying proteins or screening  
 PT for homologous nucleic acids required for cellular proliferation to  
 PT isolate candidate molecules for rational drug discovery programs.  
 XX Claim 14; SEQ ID NO 24223; 1766pp; English.  
 XX The invention relates to an isolated nucleic acid comprising any one of  
 CC the 6213 antisense sequences given in the specification where expression  
 CC of the nucleic acid inhibits proliferation of a cell. Also included are:  
 CC (1) a vector comprising a promoter operably linked to the nucleic acid  
 CC encoding a polypeptide whose expression is inhibited by the antisense  
 CC nucleic acid; (2) a host cell containing the vector; (3) an isolated  
 CC polypeptide or its fragment whose expression is inhibited by the  
 CC antisense nucleic acid; (4) an antibody capable of specifically binding  
 CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular  
 CC proliferation or the activity of a gene in an operon required for  
 CC proliferation; (7) identifying a compound that influences the activity of  
 CC the gene product or that has an activity against a biological pathway  
 CC required for proliferation, or that inhibits cellular proliferation; (8)  
 CC identifying a gene required for cellular proliferation or the biological  
 CC pathway in which a proliferation-required gene or its gene product lies  
 CC or a gene on which the test compound that inhibits proliferation of an  
 CC organism acts; (9) manufacturing an antibiotic; (10) profiling a  
 CC compound's activity; (11) a culture comprising strains in which the gene  
 CC product is overexpressed or underexpressed; (12) determining the extent  
 CC to which each of the strains is present in a culture or collection of  
 CC strains; or (13) identifying the target of a compound that inhibits the  
 CC proliferation of an organism. The antisense nucleic acids are useful for  
 CC identifying proteins or screening for homologous nucleic acids required  
 CC for cellular proliferation to isolate candidate molecules for rational  
 CC drug discovery programs, or for screening homologous nucleic acids  
 CC required for proliferation in cells other than *S. aureus*, *S. typhimurium*,  
 CC *K. pneumoniae* or *P. aeruginosa*. The present sequence is one of the target  
 CC prokaryotic essential genes. Note: The sequence data for this patent did

 DR New recombinant nucleic acid encoding carcinoma associated protein,  
 XX useful for preparing compositions for treating carcinomas.  
 PT Claim 1; SEQ ID NO 1481; 245pp; English.  
 PS The invention relates to recombinant carcinoma associated (CA) nucleic  
 CC acid sequences from mouse and human (ADA01482-ADA03094), and to  
 CC recombinant carcinoma associated proteins (CAP) encoded by them. The  
 CC invention also encompasses expression vectors and host cells comprising a  
 CC CA nucleic acid, a polypeptide (especially an antibody) that specifically  
 CC binds to the protein, and a biochip comprising CA nucleic acid or  
 CC fragments thereof. The sequences of the invention were identified using  
 CC oncogenic retroviruses, which insert into the genome of the host organism  
 CC at random. Many of these do not carry transduced host oncogenes or  
 CC pathogenic trans-acting viral genes, meaning that cancer incidence is a  
 CC direct consequence of the effects of proviral integration into host  
 CC protooncogenes. The CA nucleic acid sequences can be used to diagnose  
 CC carcinoma (especially breast cancer, prostate cancer, lymphoma or  
 CC leukaemia) or a propensity to carcinoma by determination of the sequence  
 CC of a CA gene, or by determination of CA gene expression in particular  
 CC tissues. CA nucleic acids, proteins and antibodies are also useful as  
 CC therapeutic agents and in screening and evaluating drug candidates. The  
 CC present sequence represents a specifically claimed murine CA nucleic acid  
 CC sequence of the invention. Note: The complete sequence data for this  
 CC patent did not form part of the printed specification, but was obtained  
 CC in electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences.

XX The invention relates to new recombinant nucleic acids. The invention  
CC also relates to a host cell comprising a recombinant nucleic acid or  
CC expression vector, an expression vector comprising a recombinant nucleic  
CC acid, a recombinant protein, a method of screening for drug candidates, a  
CC method of screening for a bioactive agent capable of binding to a  
CC carcinoma associated protein (CAP) encoded by a nucleotide sequence, a  
CC method of screening for a bioactive agent capable of modulating the  
CC activity of a CAP, a method of evaluating the effect of a candidate  
CC carcinoma drug, a method of diagnosing carcinomas, a method for inhibiting  
CC the activity of a CAP, a method of treating carcinomas, a method of  
CC neutralising the effect of a CAP and a method of diagnosing carcinoma or  
CC propensity to carcinoma. A method of evaluating the effect of a candidate  
CC carcinoma drug comprises administering the drug to a patient, removing a  
CC cell sample from the patient and determining alterations in the  
CC expression or activation of a gene comprising the nucleotide sequence. A  
CC method of diagnosing carcinoma comprises determining the expression of  
CC one or more genes comprising the nucleic acid sequence in a first tissue  
CC type of a first individual and comparing the expression of the gene from  
CC a second normal tissue type from the first individual or a second  
CC unaffected individual, where a difference in the expression indicates  
CC that the first individual has carcinoma. A method of inhibiting the  
CC activity of a CAP comprises binding an inhibitor to the CAP. Treating  
CC carcinomas comprises administering to a patient an inhibitor of CAP.  
CC Neutralising the effect of a CAP comprises contacting an agent specific  
CC for the CAP. The polypeptide specifically binds to the protein encoded by  
CC the nucleic acid. It comprises an antibody that specifically binds to the  
CC protein encoded by the nucleic acid. The nucleic acids are useful for  
CC preparing a composition for diagnosing or treating carcinoma e.g.,  
CC leukemia or lymphoma. This sequence represents a murine carcinoma  
CC associated (CA) nucleic acid of the invention. Note: The sequence data

XX Identifying a compound that can treat disease or disorders, such as, a

XX neuropsychiatric disorder e.g. schizophrenia, or autism, comprises

XX determining the expression of one or more efficacy genes in a cell

XX contacted with the test compound.

XX Claim 9; SEQ ID NO 71; 39pp; English.

XX This invention relates to a novel screening method identified as a multi-  
XX parameter high throughput screening (MPHS) assay. Specifically, it  
XX refers to an assay that utilises the disease signature of a plurality of  
XX specific genes associated with a particular disease, and identifies  
XX differential expression between those cells taken from individuals  
XX affected by that disease and those that are not affected. The present  
XX invention then describes the screening of candidate pharmaceutical  
XX compounds to identify those that have a potential therapeutic benefit for  
XX the treatment of neuropsychiatric and neurodegenerative disorders  
XX including schizophrenia, bipolar affective disorder (BAD) and autism, as  
XX well as Parkinson's and Alzheimer's disease. Accordingly, the compounds

CC of this invention exhibit various activities including neuroleptic,  
CC nootropic, antimanic and antidepressant. Furthermore, the screening  
CC method used in MPHTS will be automated, such that a large number of test  
CC compounds may be rapidly screened with a minimal amount of labour and  
CC effort. This polynucleotide is the cDNA sequence of a gene that is  
CC differentially expressed in mice in the presence of the therapeutic  
CC compound valproate, given in an exemplification of the invention.

XX Antisense oligonucleotide compound that inhibits expression of mRNA  
PT encoding human apolipoprotein B, useful for treating hyperlipidemia,  
PT diabetes, obesity, von Gierke's disease, lipodystrophies, Cushing's  
PT syndrome.  
XX  
XX Example 33; SEQ ID NO 334; 483pp; English.

XX  
XX The invention relates to a novel antisense compound where the compound  
CC hybridises to and inhibits expression of mRNA encoding human  
CC apolipoprotein B (ApoB) after 16-24 hours by at least 30% in 80%  
CC confluent HepG2 cells in culture at a concentration of 150 nM. The  
CC compound of the invention demonstrates cardiovascular,  
CC antiarteriosclerotic, antilipaeamic, antidiabetic, anorectic, cardiant,  
CC vasotropic, hypotensive, anabolic, eating disorder-related, cytostatic,  
CC endocrine, vasotropic, neuroprotective and nootropic activities and may  
CC be useful for inhibiting the expression of apolipoprotein B in cells or  
CC tissues in vivo in order to address a condition associated with abnormal  
CC lipid or cholesterol metabolism. The compound may be useful for  
CC decreasing circulating lipoprotein levels, triglyceride levels,  
CC cholesterol levels, lipid levels, fatty acid levels, acute phase  
CC reactants and chylomicrons and thus may be utilised during treatment of  
CC hyperlipoproteinaemia, hyperlipidaemia, hypercholesterolaemia,  
CC cardiovascular disorders, Von Gierke's disease, lipodystrophy, Cushing's  
CC syndrome, sexual ateliotic dwarfism, hyperthyroidism, hypertension,  
CC anorexia nervosa, Werner's syndrome, hepatoma, multiple myeloma, uraemia,  
CC impotence, obstructive liver disease, Alzheimer's disease, dementia, of  
CC diabetes, obesity and atherosclerosis. The current sequence is that of  
CC the human apolipoprotein B (ApoB) gDNA - SEQ ID 334 of the invention  
CC which is located at chromosome 2p23-2p24.

 DR New recombinant nucleic acid encoding carcinoma associated protein,  
 XX useful for preparing compositions for treating carcinomas.  
 PT Claim 1; SEQ ID NO 1145; 245pp; English.  
 XX The invention relates to recombinant carcinoma associated (CA) nucleic  
 CC acid sequences from mouse and human (ADA01482-ADA03094), and to  
 CC recombinant carcinoma associated proteins (CAP) encoded by them. The  
 CC invention also encompasses expression vectors and host cells comprising a  
 CC CA nucleic acid, a polypeptide (especially an antibody) that specifically  
 CC binds to the protein, and a biochip comprising CA nucleic acid or  
 CC fragments thereof. The sequences of the invention were identified using  
 CC oncogenic retroviruses, which insert into the genome of the host organism  
 CC at random. Many of these do not carry transduced host oncogenes or  
 CC pathogenic trans-acting viral genes, meaning that cancer incidence is a  
 CC direct consequence of the effects of proviral integration into host  
 CC protooncogenes. The CA nucleic acid sequences can be used to diagnose  
 CC carcinoma (especially breast cancer, prostate cancer, lymphoma or  
 CC leukaemia) or a propensity to carcinoma by determination of the sequence  
 CC of a CA gene, or by determination of CA gene expression in particular  
 CC tissues. CA nucleic acids, proteins and antibodies are also useful as  
 CC therapeutic agents and in screening and evaluating drug candidates. The  
 CC present sequence represents a specifically claimed murine CA nucleic acid  
 CC sequence of the invention. Note: The complete sequence data for this  
 CC patent did not form part of the printed specification, but was obtained  
 CC in electronic format directly from WIPO at  
 CC ftp.wipo.int/pub/published\_pct\_sequences.

CC This invention relates to novel recombinant nucleic acids for use in  
CC diagnosis and treatment of cancer, especially carcinomas, as well as the  
CC use of compositions in screening methods. The compositions of the  
CC invention may have cytostatic activity whilst the disclosed sequences may  
CC be useful for gene therapy. The carcinoma associated nucleic acids and  
CC proteins are useful for diagnosing and treating carcinomas, for example  
CC lymphoma, breast cancer, prostate cancer or leukaemia, or for screening  
CC drug candidates or bioactive agents capable of binding to, or modulating  
CC the activity of, a carcinoma associated protein. The present sequence is  
CC the genomic DNA sequence of the mouse Flt3 gene which is a carcinoma  
CC associated gene of the invention.

XX a hybridoma that produces the monoclonal antibody described above; (7) a  
XX pharmaceutical composition comprising the antibody and a pharmaceutical  
XX excipient; (8) a kit for detecting or diagnosing cancer cells, comprising  
XX the above (monoclonal) antibody or polynucleotide that selectively  
XX hybridizes to any of the polynucleotide sequences mentioned above; (9)  
XX methods for diagnosing cancer or for detecting the presence or absence of  
XX cancer cells in an individual; (10) a method for inhibiting growth of  
XX cancer cells in an individual; (11) a method for delivering a therapeutic  
XX agent to cancer cells in an individual; (12) an electronic library  
XX comprising the polynucleotide or polypeptide, or their fragments,  
XX mentioned above; (13) a method of screening for anticancer activity; (14)  
XX methods for detecting cancer associated with expression of a polypeptide  
XX or the presence of the antibody in a test cell or serum sample; (15) a  
XX method for screening for a bioactive agent capable of modulating the  
XX activity of a CA protein encoded by the above nucleic acid molecule; and  
XX (16) a method for treating cancers. (i) has cytostatic activity, and can  
XX be used in gene therapy, in vaccines, as a tyrosine kinase antagonist,  
XX and as a G-protein coupled receptor antagonist. The compositions and  
XX methods of the present invention can be used for diagnosing, preventing  
XX and treating cancer, especially lymphomas. They may also be used in  
XX screening for agents that may be used for treating or preventing cancer.

CC The present sequence represents a human CA gene sequence, which is given  
CC in the exemplification of the present invention. Note: The sequence data  
CC for this patent did not form part of the printed specification, but was  
CC obtained in electronic format directly from WIPO at  
CC ftp.wipo.int/pub/published\_pct\_sequences.

XX PT Nucleic acid array useful for detecting cancer associated nucleic acid,  
XX comprises two or more nucleic acid probes.  
XX Disclosure; SEQ ID NO 1416; 198pp; English.  
XX The invention relates to a nucleic acid array for detecting a cancer  
XX associated (CA) nucleic acid, comprising two or more nucleic acid probes.  
XX The invention also relates to a peptide array comprising two or more  
XX isolated polypeptides encoded by a CA nucleic acid sequence, a compound  
XX that binds to a polypeptide, an isolated antibody or its fragment which  
XX binds to a polypeptide, which is prepared by immunizing a host animal  
XX with a composition comprising the polypeptide or its antigen binding  
XX fragment and collecting cells from the host expressing antibodies against  
XX the antigen or its antigen binding fragment, a composition comprising the  
XX antibody and a carrier, a method of screening for anticancer activity, a  
XX method of detecting a CA nucleic acid, a method of diagnosing cancer, a  
XX method of treating cancer and a method of inhibiting expression of a CA  
XX nucleic acid in a cell. The CA nucleic acids are useful for detecting CA  
XX nucleic acids. The antibody is useful for detecting the presence or  
XX absence of cancer cells in an individual which involves contacting cells  
XX from the individual with the antibody and detecting a complex of a CA  
XX protein from the cancer cells and the antibody, where the detection of  
XX the complex correlates with the presence of cancer cells in the  
XX individual. The composition is useful for inhibiting growth of cancer  
XX cells in an individual or for delivering a therapeutic agent to cancer  
XX cells in an individual. The invention is also useful for diagnosing  
XX cancer, for treating cancer and for inhibiting expression of a CA gene in

CC a cell. This sequence represents murine cancer-associated genomic DNA of  
CC the invention.

XX PT Novel human cancer associated protein encoded within open reading frame

XX of cancer associated gene, useful as targets for diagnosing cancer.

XX PS Disclosure; SEQ ID NO 843; 182pp; English.

XX CC The invention relates to cancer-associated proteins (CAP) and the cancer-

XX associated (CA) nucleic acids encoding them. The invention also relates

XX to a method for treating cancers involving administering to a patient an

XX inhibitor of CAP, and a method of screening for anticancer activity in a

XX potential drug involving providing a cell that expresses a CA gene,

XX contacting a tissue sample derived from a cancer cell with an anticancer

XX drug candidate and monitoring the effect of the anticancer drug candidate

XX on expression of the CA gene. The CAP proteins are useful for detecting

XX cancer associated with expression of a CAP protein in a test cell sample

XX and for screening for a bioactive agent capable of modulating the

XX activity of a CAP protein. The CA nucleic acids are useful for diagnosing

XX cancer, involving determining the expression of a CA nucleic acid in a

XX tissue. This sequence represents a murine CA gene of the invention. Note:

XX The sequence data for this patent did not form part of the printed

XX specification, but was obtained in electronic format directly from WIPO

New recombinant nucleic acid encoding carcinoma associated protein,
PT      useful for preparing compositions for treating carcinomas.
XX
PS      Claim 1; SEQ ID NO 1145; 245pp; English.
XX
CC      The invention relates to recombinant carcinoma associated (CA) nucleic
CC      acid sequences from mouse and human (ADA01482-ADA03094), and to
CC      recombinant carcinoma associated proteins (CAP) encoded by them. The
CC      invention also encompasses expression vectors and host cells comprising a
CC      CA nucleic acid, a polypeptide (especially an antibody) that specifically
CC      binds to the protein, and a biochip comprising CA nucleic acid or
CC      fragments thereof. The sequences of the invention were identified using
CC      oncogenic retroviruses, which insert into the genome of the host organism
CC      at random. Many of these do not carry transduced host oncogenes or
CC      pathogenic trans-acting viral genes, meaning that cancer incidence is a
CC      direct consequence of the effects of proviral integration into host
CC      protooncogenes. The CA nucleic acid sequences can be used to diagnose
CC      carcinoma (especially breast cancer, prostate cancer, lymphoma or
CC      leukaemia) or a propensity to carcinoma by determination of the sequence
CC      of a CA gene, or by determination of CA gene expression in particular
CC      tissues. CA nucleic acids, proteins and antibodies are also useful as
CC      therapeutic agents and in screening and evaluating drug candidates. The
CC      present sequence represents a specifically claimed murine CA nucleic acid
CC      sequence of the invention. Note: The complete sequence data for this
CC      patent did not form part of the printed specification, but was obtained
CC      in electronic format directly from WIPO at
CC      ftp.wipo.int/pub/published_pct_sequences.

XX

CC The invention relates to a polynucleotide having any of 6006 specific  
 CC sequences (ABZ50888-ABZ56893), which are expressed by a fungus under  
 CC specific culture conditions including one or more of eutrophic,  
 CC oligotrophic, solid, early germination, alkaline, high temperature, low  
 CC temperature or mold culture or polynucleotides stringently hybridising  
 CC to these sequences. The polynucleotides are useful for monitoring the  
 CC progress of fermentation and the growth conditions of a fungus, trial  
 CC especially of Aspergillus oryzae which is widely used in industrial  
 CC fermentation. Also monitoring for fungal contamination. Note: The  
 CC sequence data for this patent did not form part of the printed  
 CC specification, but was obtained in electronic format directly from WIPO  
 CC at ftp.wipo.int/pub/published\_pct\_sequences

XX The present invention relates to cancer associated sequences (ADQ97025-  
 XX ADQ98004). The sequences are useful for the diagnosis, prevention and/or  
 XX treatment of cancer, such as leukemia and lymphoma. Note: The sequence  
 XX data for this patent did not form part of the printed specification, but  
 XX was obtained in electronic format directly from WIPO at  
 XX ftp.wipo.int/pub/published\_pct\_sequences.

XX  
XX New oligomeric compound that can hybridize with or sterically interfere  
PT with nucleic acid molecules comprising or encoding small non-coding RNA  
PT targets, useful for treating e.g., cancer and diabetes.  
XX  
XX Example 34; SEQ ID NO 1605; 854pp; English.  
XX  
XX The invention relates to an oligomeric compound comprising a first region  
CC and a second region, where at least one region contains a modification,  
CC and a portion of the oligomeric compound is targeted to a small non-  
CC coding RNA target nucleic acid that is miRNA (micro-RNA), or its  
CC precursor (primary-miRNA, pri-miRNA). Also included are a composition  
CC comprising a first oligomeric compound and a second oligomeric compound  
CC (where at least one of the oligomeric compounds contains a modification,  
CC at least a portion of the first oligomeric compound is capable of  
CC hybridizing with at least a portion of the second oligomeric compound,  
CC and at least a portion of the first oligomeric compound is targeted to a  
CC small non-coding RNA target nucleic acid), a pharmaceutical composition  
CC comprising the composition cited above (and a carrier), a kit or assay  
CC device comprising the composition, modulating the expression of a small  
CC non-coding RNA target nucleic acid in a cell (or tissue or animal),  
CC treating or preventing a disease or disorder associated with a small non-  
CC coding RNA target nucleic acid, treating a condition in an animal,  
CC treating or preventing a disease or disorder associated with CD3e,  
CC methods of screening an oligomeric compound for an effect on miRNA  
CC signaling, methods of screening a miRNA precursor for an effect in miRNA  
CC signaling, methods of modulating translation (or apoptosis, conversion of

CC a precursor miRNA into miRNA, or cellular differentiation), identifying  
CC an RNA transcript bound to a small non-coding RNA, arresting (or  
CC delaying) entry of a cell at the G2/M phase, interfering with chromosome  
CC segregation, a method of triggering apoptosis, detecting a miRNA  
CC precursor, identifying a miRNA target, modulating cellular  
CC differentiation, treating a condition associated with adipocyte  
CC differentiation in an animal, treating/preventing a disease/disorder  
CC associated with aberrant regulation of the cell cycle by miRNAs,  
CC maintaining a pluripotent stem cell and identifying a small non-coding  
CC RNA binding site. The oligomeric compound is targeted to a region  
CC flanking a Drosha cleavage site within a pri-miRNA. It stimulates an  
CC increase in expression of a pri-miRNA. The compounds and compositions are  
CC useful for treating a disease or disorder resulting from chromosomal non-  
CC disjunction, altered methylation, acetylation, or pseudouridylation state  
CC of chromosomes, such as a hyperproliferative condition (e.g. cancer,  
CC neoplasia or angiogenesis), diabetes (Type 2 diabetes), obesity,  
CC hyperlipidemia, atherosclerosis, atherogenesis, hypertension, anorexia,  
CC Alzheimer's disease, a central nervous system injury or neurodegenerative  
CC disorder. The present sequence is a primary miRNA of the invention.

XX Claim 1; Page 75; 296pp; English.  
XX

CC The invention describes an isolated murine polynucleotide (I) comprising  
CC a contiguous stretch of at least 60 nucleotides of one of 265-677  
CC nucleotide 891 OMNIBANK gene trapped sequences (GTSs) (S), given in the  
CC specification. The novel genes and cells are useful in functional genomic  
CC analysis and in the discovery and development of new therapeutic and  
CC diagnostic agents and methods. (I) is useful for identifying the coding  
CC regions of the murine genome, to isolate cDNAs, genomic clones, or full-  
CC length genes/polynucleotides or homologues, heterologues, paralogues, or  
CC orthologues that are capable of hybridising to one or more of the GTSs  
CC under stringent conditions. (I) can be incorporated into a phage display  
CC system that can be used to screen for proteins, or other ligands, that  
CC are capable of binding an amino acid sequence encoded by an  
CC oligonucleotide or polynucleotide sequence in at least one of the TS  
CC sequences. (I) is useful in addressable arrays, such as gene chips, to  
CC identify and characterise temporal and tissue specific gene expression,  
CC to identify the gene of interest from many sources and for genetic  
CC manipulations such as antisense inhibition and gene targeting. Decreasing  
CC the level of expression of (I) and/or down regulating the activity of  
CC peptides or proteins encoded by (I) is useful for treating development  
CC and cell differentiation disorders, aging, cancer, autoimmune disease,  
CC lupus, inflammatory disorders, skin disorders and degenerative disorders.  
CC This sequence represents a murine cDNA isolated using gene trap  
CC technology

DR  
XX New genetically engineered nucleic acid molecule, useful for preparing an  
PT agent for recombining a DNA molecule containing phic31 integrase  
PT recognition sequences in a eukaryotic cell, a vertebrate or transgenic  
PT organism.

XX Example 3; Page 71-73; 87pp; English.  
PS  
XX This invention relates to novel genetically engineered nucleic acid  
CC molecules encoding phic31 integrase (C31-Int), which has been codon  
CC optimised for expression in eukaryotic host cells. The phic31 integrase  
CC is a site specific recombinase (SSR) that catalyzes recombination between  
CC two phic31 recognition sequences. The introduction of silent mutations  
CC into the coding sequence changes the given codon to one that is most  
CC frequently used in the respective host, which in turn alters expression  
CC levels. Accordingly, using this ability to generate controlled and  
CC permanent modifications in eukaryotic genomes has various research  
CC applications including the study of gene function and the creation of  
CC disease models, as well as gene therapy for medical applications, and the  
CC design of economically important animals and crops. Furthermore, the  
CC phic31 integrase of the invention is useful for preparing an agent for  
CC recombining a DNA molecule containing phic31 integrase recognition  
CC sequences in a eukaryotic cell, a vertebrate or transgenic organism. This  
CC polynucleotide sequence is the murine downstream homology arm located in  
CC the ROSA26 promoter targeting vectors and required for homologous  
CC recombination in ES cells, used in an exemplification of the invention.

XX Generating transgenic eukaryotic cells having a modified Rosa26 locus  
PT comprises introducing a functional DNA sequence into the Rosa26 locus of  
PT starting eukaryotic cells by homologous recombination with a targeting  
PT vector.

XX Disclosure; SEQ ID NO 5; 26pp; English.  
PS  
XX The specification describes a method for targeted transgenesis, which  
CC generates transgenic eukaryotic cells having a modified Rosa26 locus. The  
CC method comprises introducing a functional DNA sequence into the Rosa26  
CC locus of starting eukaryotic cells by homologous recombination with a  
CC targeting vector comprising the functional DNA sequence flanked by DNA  
CC sequences homologous to the Rosa26 locus. Rosa26 supports the  
CC preservation of inherent activity of heterologous promoters inserted  
CC through homologous recombination into the locus. The method of the  
CC invention is useful for generating transgenic eukaryotic cells. The  
CC eukaryotic cells are useful for gene function studies, drug development  
CC and as disease models. ADQ76466-ADQ76467 represent 5' and 3' arms of a  
CC Rosa26 targeting vector. These two sequences enable homologous  
CC recombination into the Rosa locus.

XX Generating transgenic eukaryotic cells and animals having a modified
PT Rosa26 locus by introducing a functional DNA sequence into the Rosa26
PT locus, useful in gene function studies and drug development.
XX
XX Claim 6; SEQ ID NO 5; 53pp; English.
XX
XX The present invention relates to generating transgenic eukaryotic cells
CC having a modified Rosa26 locus comprising introducing a functional DNA
CC sequence into the Rosa26 locus of starting eukaryotic cells, where the
CC functional DNA sequence is a gene expression cassette comprising a gene
CC of interest operatively linked to a promoter or is a DNA sequence which
CC can be converted into such a gene expression cassette. The methods and
CC compositions of the present invention are useful in targeted transgenesis
CC using the Rosa26 locus. The transgenic cells and organisms are useful for
CC gene function studies, drug development and as disease model animals. The
CC present sequence represents the Rosa26 locus 3' arm.

PT recombination of eukaryotic cells.
XX
XX Example 1; SEQ ID NO 5; 46pp; English.
XX
XX The present invention relates to a vector for targeted homologous
CC recombination of eukaryotic cells, comprising a homologous targeting
CC cassette harbouring a functional DNA sequence, and an expression cassette
CC harbouring a functional DNA sequence coding for a first detectable
CC marker, with the expression cassette being connected with the homologous
CC targeting cassette so as to allow distinction between targeted and non-
CC targeted cells. The vector is useful for homologous recombination of
CC eukaryotic cells, which is useful for preparing transgenic tissues,
CC organs and/or multi-cell organisms. The transgenic multi-cell organism is
CC a non-human mammal, most preferably mouse. The present sequence is a
CC fragment of the murine Rosa26 gene used in the exemplification of the
CC invention.

PT Isolating primary mammalian after homologous recombination comprises  
PT transfecting primary cells with a homologous targeting vector comprising  
PT cassette with detectable marker.  
XX  
XX  
PS Example 1; SEQ ID NO 5; 67pp; English.  
XX  
CC The invention provides the method for automatic identification and  
CC isolation of cells harbouring a predetermined genetic modification  
CC (homologous recombination) by using a detectable marker (fluorescence  
CC marker). The homologous targeting sequence comprises a functional DNA  
CC segment and a positive selection marker, or a functional DNA segment and  
CC a first detectable marker and two DNA segments homologous to the  
CC integration site within the genome. The second expression cassette  
CC comprises the DNA sequence coding for a second detectable marker which is  
CC different from first detectable marker. The gene targeting vector  
CC contains a positive selection marker (neomycin) inside the targeting  
CC cassette and a fluorescent marker outside the region of homology. The  
CC positive selection marker is flanked by one or more RRSs (recombinase  
CC recognition sites) and encoding a protein which is resistance against  
CC cell poison. The first and second detectable markers are DNA sequences  
CC encoding a protein which allows direct or indirect optical detection. The  
CC second detectable marker differs from the first detectable marker to  
CC allow separate detection. The detectable marker is a membrane bound or  
CC protein with membrane anchoring signal sequence. The vectors for targeted  
CC homologous recombination contain one or more expression cassette(s)  
CC coding for a detectable marker placed outside the targeting cassette,  
CC which allows rapid and reliable distinction between targeted and non-  
CC targeted ES cells in an automated fashion. The detection strategy of the  
CC invention allows selective identification of the gene targeted embryonic  
CC stem cell clones without exposing the ES cells to potentially toxic  
CC chemicals, proteins or mutagens. It provides automated optical selection  
CC of clones enriched for a homologous recombination event by applying  
CC gentle sorting machinery. This method identifies a higher percentage of  
CC clones showing homologous recombination compared to the standard  
CC procedure. This method also reduces the manual labour and costs (required  
CC for gene targeting experiment). The first detectable marker in a  
CC preferred vector of the invention is ZeGreen and the constitutive  
CC promoter is the CAGGS promoter. The Rosa locus of the mouse was chosen  
CC for homologous recombination. The methods are useful for isolating  
CC primary mammalian cells after homologous recombination and for preparing  
CC transgenic tissues, organs and multi-cell organisms. The presented  
CC nucleotide sequence is the mouse 3' arm of Rosa26.

XX New expression vector comprising a short hairpin RNA (shRNA) construct  
PT under the control of a ubiquitous promoter, useful for constitutive  
PT and/or inducible gene knock down in a vertebrate, or in a tissue.  
XX  
PS Example; SEQ ID NO 2; 70pp; English.  
XX  
CC The present invention describes an expression vector comprising a short  
CC hairpin RNA (shRNA) construct under the control of a ubiquitous promoter.  
CC Also described: (1) a method for constitutive and/or inducible gene knock  
CC down in a vertebrate, or in a tissue culture or cells of a cell culture  
CC derived from a vertebrate by stably integrating an expression vector into  
CC the genome of the vertebrate, of the tissue culture or of the cells of  
CC the cell culture; and (2) a vertebrate or tissue or cell culture derived  
CC from a vertebrate having stably integrated, preferably at a polymerase II  
CC dependent locus or the vertebrate, tissue culture or cells of the tissue  
CC culture, an expression vector as defined above. The expression vector can  
CC be used in gene therapy. The expression vector is useful for preparing an  
CC agent, shRNA, for constitutive and/or inducible gene knock down in a  
CC vertebrate, or in a tissue culture or cells of a cell culture derived  
CC from a vertebrate. The present sequence represents a nucleotide sequence  
CC which is used in the exemplification of the present invention.

 XX New genetically engineered nucleic acid molecule, useful for preparing an  
 PT agent for recombining a DNA molecule containing phic31 integrase  
 PT recognition sequences in a eukaryotic cell, a vertebrate or transgenic  
 PT organism.  
 XX  
 XX Example 3; Page 73-79; 87pp; English.  
 PS  
 XX This invention relates to novel genetically engineered nucleic acid  
 XX molecules encoding phic31 integrase (C31-Int), which has been codon  
 CC optimised for expression in eukaryotic host cells. The phic31 integrase  
 CC is a site specific recombinase (SSR) that catalyzes recombination between  
 CC two phic31 recognition sequences. The introduction of silent mutations  
 CC into the coding sequence changes the given codon to one that is most  
 CC frequently used in the respective host, which in turn alters expression  
 CC levels. Accordingly, using this ability to generate controlled and  
 CC permanent modifications in eukaryotic genomes has various research  
 CC applications including the study of gene function and the creation of  
 CC disease models, as well as gene therapy for medical applications, and the  
 CC design of economically important animals and crops. Furthermore, the  
 CC phic31 integrase of the invention is useful for preparing an agent for  
 CC recombining a DNA molecule containing phic31 integrase recognition  
 CC sequences in a eukaryotic cell, a vertebrate or transgenic organism. This  
 CC polynucleotide sequence is the pRosa12 vector comprising an adenoviral  
 CC splice acceptor site inserted between the two ROSA26 promoter homology  
 CC arms, used in an exemplification of the invention.

 PS  
 XX The present sequence for mouse FosB DNA is used to generate a targeting  
 CC cassette and vector in the invention of novel targeting constructs and  
 CC methods of using them for creating transgenic animals in which at least 1  
 CC single-copy, non-essential gene is replaced with a reporter expression  
 CC cassette (e.g. a luciferase gene linked to a promoter heterologous to the  
 CC single-copy, non-essential gene). The single-copy, non-essential gene may  
 CC be selected from vitronectin (Vn), fosB and galactin 3. The promoter  
 CC element may be selected from VEGF, VEGFR and Tie2. The constructs may  
 CC contain a selectable marker e.g. neomycin phosphotransferase II,  
 CC chloramphenicol acetyltransferase and thymidine kinase. The constructs  
 CC are useful for creating transgenic animals in which at least 1 single-  
 CC copy, non-essential gene is replaced with a reporter expression cassette.  
 CC Methods of using these animals are also described

musculus C57BL/6J (female) was obtained from the Jackson

Laboratory Mouse DNA Resource

(http://www.jax.org/resources/documents/dnares/). The DNA

was hydrodynamically sheared by repeated passage through a

0.005 inch orifice at constant velocity. The sheared DNA

was blunt end-repaired with T4 DNA polymerase and T4

polynucleotide kinase. Adaptor oligonucleotides were

ligated to the blunt ends in high molar excess. The

adapted DNA was purified and size-selected for a 9.5 to

10.5 kb range using preparative agarose gel

electrophoresis. Vector DNA was prepared from a derivative

of PWD42 [gi|4732114|gb|AF129072.1], a copy-number

inducible derivative of plasmid R1. The vector was ligated

with adaptors complementary to the insert adaptors and

purified. The sheared, adapted mouse DNA was annealed to

adapted vector DNA, and transformed into

Site 2: NotI; Mouse cDNA project by the Laboratory of  
Genetics, National Institute on Aging (NIA), Intramural  
Research Program, NIH (http://lgsun.grc.nia.nih.gov/cDNA).  
This is a long-transcript enriched cDNA library (Ref.  
Genome Res. 11: 1553-1558 (2001). [PMID: 11544199]). Total  
RNAs were extracted from 1 embryo at 13.5-days postcoitum.  
Double-stranded cDNAs were synthesized with an Oligo(dT)  
primer [Invitrogen]:  
5'-pgactagtcttagatcgccgcgcctttttttttt-3' from  
3ug of total RNA, treated with T4 DNA polymerase, and  
purified by ethanol-precipitation. The cDNAs were ligated  
to lone-linker LI-Sal4, purified by phenol/chloroform, and  
separated from free linkers by Centricon 100. Then, the  
cDNAs were amplified by long-range high fidelity PCR using  
Ex Taq polymerase (Takara) with a primer Sal4-S. The  
products were purified by phenol/chloroform and Centricon  
100. The cDNAs were digested with SalI and NotI enzymes  
and cloned into SalI/NotI site of pCMV-SPORT6 plasmid  
vector. The DH10B E. coli host was transformed with the  
ligation mixture by the standard chemical method. The  
average insert size is about 3.0Kb. The library was  
constructed by Yulan Piao."

The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptor DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (G1[4732114|9b|AF129072.1]), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptor mouse DNA was annealed to adaptor vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

The sequence contained an oligo-dT track that was present in the

oligonucleotide that was used to prime the synthesis of first

strand cDNA and therefore this may represent a bonafide poly A

tail. The sequence tag present in the cDNA between the NotI site

and the oligo-dT track served to verify it as a clone from the

non-normalized rat tongue library cDNA Library Preparation: M.B. Soares Lab Clone distribution: clones will be available through Research Genetics (www.resgen.com) The following repetitive elements were found in this cDNA sequence: 1-155, >B2#SINE/B2 164-255, >ID RN#SINE/ID 258-294, >B2#SINE/B2 299-493, >B2#SINE/B2 Seq primer: M13 Forward POLYA=Yes.

(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with T4 DNA polymerase and T4 polynucleotide kinase. Adaptor oligonucleotides were ligated to the blunt ends in high molar excess. The adaptor DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarose gel electrophoresis. Vector DNA was prepared from a derivative of pWD42 (gi|4732114|gb|AF129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptor mouse DNA was annealed to adaptor vector DNA, and transformed into chemically-competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."

 musculus C57BL/6J (male) was obtained from the Jackson  
 Laboratory Mouse DNA Resource  
 (http://www.jax.org/resources/documents/dnares/). The DNA  
 was hydrodynamically sheared by repeated passage through a  
 0.005 inch orifice at constant velocity. The sheared DNA  
 was blunt end-repaired with T4 DNA polymerase and T4  
 polynucleotide kinase. Adaptor oligonucleotides were  
 ligated to the blunt ends in high molar excess. The  
 adaptor DNA was purified and size-selected for a 9.5 to  
 10.5 kb range using preparative agarose gel  
 electrophoresis. Vector DNA was prepared from a derivative  
 of pWD42 [gi|4732114|gb|AF129072.1], a copy-number  
 inducible derivative of plasmid R1. The vector was ligated  
 with adaptors complementary to the insert adaptors and  
 purified. The sheared, adaptor mouse DNA was annealed to  
 adaptor vector DNA, and transformed into  
 chemically-competent E. coli XL10-Gold (Stratagene) cells  
 and selected for ampicillin resistance."

/note="Vector: PWD42nv; Purified genomic DNA from M.

musculus C57BL/6J (male) was obtained from the Jackson

Laboratory Mouse DNA Resource

(http://www.jax.org/resources/documents/dnares/). The DNA

was hydrodynamically sheared by repeated passage through a

0.005 inch orifice at constant velocity. The sheared DNA

was blunt end-repaired with T4 DNA polymerase and T4

polynucleotide kinase. Adaptor oligonucleotides were

ligated to the blunt ends in high molar excess. The

adaptored DNA was purified and size-selected for a 9.5 to

10.5 kb range using preparative agarose gel  
 electrophoresis. Vector DNA was prepared from a derivative  
 of pWD42 (gi|4732114|gb|AF129072.1), a copy-number  
 inducible derivative of plasmid RL. The vector was ligated  
 with adaptors complementary to the insert adaptors and  
 purified. The sheared, adaptored mouse DNA was annealed to  
 adaptored vector DNA, and transformed into  
 chemically-competent E. coli XL10-Gold (Stratagene) cells  
 and selected for ampicillin resistance."
